Shopify Inc.

2 July 2026 · the qualitative

$121.63

NASDAQ : SHOP · Mature-Company DCF

$158B mkt cap · 1.30B sh · $5.778B cash, zero debt · Net cash ~$5.8B, no debt; ~1.30B fully-diluted shares; a $2B buyback underway; Revenue $11.56B FY25 (+34%); GAAP op margin 12.7%; FCF ~$2.0B (~17%); ex-SBC owner FCF is the cash signal (SBC ~4-5%); ~$108, down ~30% YTD off the $182 high (TTM ~flat); 52-wk $94-$182; GMV $100.7B/+35% in Q1, Payments 67% of GMV

THE CENTRAL QUESTION

Does agentic-AI commerce make Shopify the merchant rails for AI shopping agents, or disintermediate the storefront it sells?

Shopify trades at ~$140.6B (~$108.24, down ~30% YTD off the $182 high) — ~30x forward / ~67x trailing FCF on revenue and GMV growing ~34-35%, net cash ~$5.8B, FCF ~$2.0B (~17%). The headline GAAP net loss is a non-cash equity-investment mark; ex-that, earnings are ~$360M. The bull is durable 30%+ GMV compounding, take-rate expansion (Payments at 67% of GMV), and agentic commerce making Shopify the rails for AI shopping agents; the bear is AI disintermediating the storefront plus macro cyclicality on GMV. The weighted DCF lands -15.1% (~$92): a great franchise, de-rated but still priced for the win.

PROBABILITY-WEIGHTED EXPECTED VALUE

$91.88 expected fair value today

-24.5% vs spot $121.63

FORWARD COMPOUNDED VALUE

+5y	+10y	+15y	+20y
$140.52	$215.06	$329.38	$504.83
1.16× spot	1.77× spot	2.71× spot	4.15× spot

WEIGHTING RATIONALE

Ultra Bear 15% AI disintermediates the storefront; growth fades; ~$31 (-71%).
Bear 27% Growth decelerates and the multiple compresses; ~$55 (-49%).
Base 32% 30%+ GMV grinds to ~$25B revenue but stays rich; ~$88 (-18%).
Bull 18% Take-rate + agentic rails compound; ~$150 (+39%).
Ultra Bull 8% The commerce OS for AI shopping; ~$212 (+96%).

Bull (18%) + Ultra Bull (8%) together contribute $44.02 — 48% of the $91.88 expected value despite 26% combined probability. Today's spot ($121.63) sits 32% above the weighted expected; forward-weighted value crosses spot between +5y and +10y.

Shopify Inc. scenario narratives

PROBABILITY WEIGHTS

Ultra Bear 15% Bear 27% Base 32% Bull 18% Ultra Bull 8% · Weighted expected $91.88 (-24.5% vs spot)

ULTRA BEAR $31.11

-74.4% vs spot

Probability 15%

AI disintermediates the storefront.

WHY 15%

The genuine bear, sharpened by the June-2026 software-sector AI-disruption selloff: if agents disintermediate storefronts, the whole premium unwinds. 15% on the swing factor breaking against Shopify.

WHAT HAPPENS

Agentic commerce routes around the merchant storefront: AI shopping agents transact directly with brands and marketplaces, GMV growth halves toward low-double then mid-single digits, and take-rate gains stall as Shopify becomes a commoditized back-end. A consumer/macro downturn compounds the GMV hit; revenue compounds ~7% as the platform de-rates.

A decelerating platform losing its distribution edge earns a compressed ~3.8-4x sales / ~14x FCF terminal → DCF ~$31 (-71%). Net cash sets a floor, but a richly-priced growth name re-rates hard when the growth and the moat both fade.

BEAR $55.23

-54.6% vs spot

Probability 27%

Growth decelerates; multiple compresses.

WHY 27%

Deceleration at scale plus multiple compression is the base-rate path for a richly-valued grower. 27% as the plausible 'still grows, but the premium leaks out' outcome.

WHAT HAPPENS

GMV keeps compounding but decelerates faster than the bulls expect as the law of large numbers and a soft consumer bite; take-rate expansion continues (Payments penetration) but operating leverage is gradual. Revenue compounds ~12% to the high-$20Bs at a ~22% FCF margin — solid, but not enough to support today's multiple.

DCF ~$55 (-49%) — a high-quality but maturing platform re-rates toward ~6x sales / ~18x FCF; the market's premium is unwarranted if growth normalizes without an AI-driven second leg.

BASE $88.38

-27.3% vs spot

Probability 32%

30%+ GMV grinds to ~$25B revenue; still rich.

WHY 32%

Requires GMV to keep compounding and FCF margin to inflect on operating leverage — consistent with four straight mid-teens-FCF-margin quarters and the take-rate runway, but not a re-acceleration. 32% as the central, modestly-negative outcome.

WHAT HAPPENS

The modal path: GMV keeps compounding ~20%+ decelerating to mid-teens, Payments penetration and attach (Installments, Tax, Capital) lift take-rate, and operating leverage carries FCF margin toward ~26%. Agentic commerce is a tailwind, not a step-change. Revenue compounds ~17% to ~$25B.

DCF ~$88 (-18%) — even durable high-teens growth and FCF inflection only support roughly ~8x sales / ~22x FCF, modestly below today's price. The de-rate corrected some of the excess; the modal case still prices the win, so it lands short of fair.

BULL $150.26

+23.5% vs spot

Probability 18%

Take-rate + agentic rails compound.

WHY 18%

Shopify's GMV compounding, take-rate runway, and early agentic-commerce traction make a durable second leg credible. ~18% weight on the swing factor breaking Shopify's way.

WHAT HAPPENS

Durable 30%+ GMV compounding holds: Payments climbs above 67% of GMV, the attach suite (Installments, Tax, Capital, Markets, offline POS) widens take-rate, Plus/enterprise and international keep mix premium, and agentic commerce makes Shopify the default rails for AI shopping agents (AI traffic +8x, AI orders +15x YoY). FCF margin inflects toward ~31% on operating leverage. Revenue compounds ~21% to the low-$30Bs.

DCF ~$150 (+39%) - if take-rate expansion and an AI-distribution second leg both land, the franchise re-rates with the fundamentals; this is the core of the bull.

ULTRA BULL $212.20

+74.5% vs spot

Probability 8%

The commerce OS for the AI-shopping era.

WHY 8%

Everything works - GMV AND take-rate AND agentic distribution AND a multiple re-rate, the platform-second-act outcome. ~8%, the long-duration tail.

WHAT HAPPENS

The full second act: Shopify becomes the indispensable merchant infrastructure for the agentic-commerce era — the rails every AI shopping agent transacts through — while Payments, capital-markets, and enterprise penetration push take-rate and FCF margin to ~34%. GMV compounds ~30%+ for longer than the base assumes; revenue compounds ~26% to the mid-$30Bs.

DCF ~$212 (+96%) - the platform reclaims and extends a premium compounder multiple; ~8% probability, the asymmetric upside the de-rated entry is buying.

Shopify Inc. 7 Powers · the moat, scored

Bear $55.23 Base $88.38 Bull $150.26

Arena. E-commerce / commerce-platform infrastructure - Shopify (the commerce OS for ~merchants of all sizes, GMV ~$100B/quarter) vs Amazon (marketplace + logistics), MercadoLibre, Block/Square, BigCommerce, WooCommerce, and the AI-agent commerce layer (ChatGPT/Gemini); auditing a network/switching-cost Power against an AI-distribution threat.

POWER AUDIT
dominant-power durability: high

POWER AUDIT · 7 POWERS

Power	Score	Assessment
Scale Economies	3/3	Real R&D/infrastructure leverage at ~$11.6B revenue and ~$100B/quarter GMV - payments routing, fraud, fulfillment - spread across the largest non-Amazon merchant base, though Amazon is far larger.
Network Economies · thesis leans here	3/3	The dominant Power: a two-sided merchant + app/partner/developer ecosystem (themes, apps, agencies, Shop app shoppers) where each side makes the platform more valuable to the other - the deepest moat, now tested by AI distribution.
Counter-Positioning	1/3	Was the anti-Amazon 'arm the rebels' positioning; now the incumbent commerce OS, so this is largely spent as a Power.
Switching Costs	3/3	High: a merchant's entire operations - storefront, payments, inventory, apps, customer data, staff training - live on Shopify; ripping it out mid-business is costly and risky, hence ~$212M MRR with low churn.
Branding	2/3	A genuine brand among entrepreneurs/SMBs (the default 'start a store' choice) and increasingly enterprise via Plus, but brand isn't the primary economic Power here.
Cornered Resource	1/3	The merchant dataset and the Shop app's shopper graph are valuable, but not a truly cornered, exclusive resource.
Process Power	2/3	Strong shipping cadence and platform reliability at scale, plus margin/FCF discipline post-2022-23 cuts (opex -4pp to 37%); real but replicable.

PEER SET

Amazon (AMZN) — 11% gr · 11% mgn · ~12x EV/FCF
The marketplace + logistics giant; far larger GMV, the structural competitor and the 'own the customer' alternative to Shopify's 'arm the merchant'.

MercadoLibre (MELI) — 30% gr · 12% mgn · ~30x EV/FCF
LatAm commerce + fintech compounder; the closest 'commerce + payments flywheel' public comp, growing fast at scale.

Block / Square (SQ) — 10% gr · 10% mgn · ~14x EV/FCF
Payments + commerce for SMBs; overlaps on the merchant payments/lending stack at a lower multiple.

BigCommerce (BIGC) — 5% gr · ~1x EV/sales
Direct SaaS-commerce competitor; far smaller and slower-growing - the value end of the platform comp set.

THREAT VECTORS · FALSIFIERS

Network Economies · AI shopping agents (ChatGPT, Gemini, Google AI Mode, Copilot)
`falsifier:` AI-agent GMV grows but transacts around Shopify's rails - shoppers buy through agents that bypass the merchant storefront, eroding the ecosystem's value.

Switching Costs · An agent-native commerce stack / Amazon's agent rails
`falsifier:` Merchants add a parallel AI-agent sales channel that doesn't depend on Shopify, lowering the cost of running storefront-light.

Scale Economies · Amazon (marketplace + Buy with Prime + logistics)
`falsifier:` Amazon's logistics/agent advantages pull GMV and take-rate share, capping Shopify's monetization runway.

> **COMPETITIVE READ**
> Shopify's dominant Power is network economies - a two-sided merchant + app/partner/developer ecosystem reinforced by high switching costs (a merchant's whole operation lives on the platform, ~$212M MRR at low churn) - and that moat is durable (high). The live threat is the same agentic-AI variable that drives the scenarios: AI shopping agents either transact through Shopify's rails (deepening the network) or route around the storefront (disintermediating it), with AI traffic +8x / orders +15x YoY the early, unresolved signal. That single swing factor - expand-distribution vs disintermediate - is why the bull (+39%) and the ultra-bear (-71%) span such a wide range on the same fact. The Audit: a genuinely strong, durable Power, but priced for the win - the ~30% YTD de-rate to ~30x forward FCF still embeds a premium that the modal case (-18%) doesn't quite support, so the weighted finding lands -15.1%.

Shopify Inc. People · Opportunity · Context · Deal

Bear $55.23 Base $88.38 Bull $150.26

Underwrite the position the way a venture investor underwrites a round — across all four legs, public or private. **People** is the leg scored here (observable only); Opportunity, Context and Deal cross-reference the rest of the memo.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Tobi Lütke · founder-led — 20 yrs in seat

6.1% insider ownership

HIGH key-person risk

Capital allocation (realized)
No dividend, no buyback — has never returned capital; cash funds R&D, marketable securities, and equity/merchant-lending investments. The notable observable course-correction: the 2022 ~$2.1B Deliverr acquisition (its largest ever) was reversed in 2023, selling Shopify Logistics to Flexport for a ~13% Flexport equity stake. SBC ~$546M in FY2024 (down ~30% YoY).

Incentive alignment
US$1 salary, no cash bonus; paid in equity grants (~$20M/yr — FY2023 total comp $20,000,008 = $1 cash + ~$20M equity). Carries the combined title of Chair, CEO, and Head of R&D. Alignment runs through the founder stake rather than fresh cash pay.

GOVERNANCE FLAGS

- dual-class: Class B multiple-voting shares = 10 votes each (~9.5% of equity, ~51% of votes)
- 2022 founder share tops Lütke up to ~40% of votes for life while he serves as director/officer/consultant — holds even if his economic stake falls to ~1.1%
- combined Chair + CEO (also Head of R&D)
- founder share is non-transferable; sunsets only if Lütke leaves the company

THE FOUR LEGS

People — ●●●○○
observable composite · 1–5

Opportunity
The scenario distribution · the business snapshot · the Arthur Indicator

Context
The 7 Powers analysis (Power Audit)

Deal
Open-market common — entry price weighed against the probability-weighted fair value (the -15.1% finding), then position-sized.

> **PEOPLE READ**
> Founder-CEO holding ~6.1% economic but ~40% of the vote via Class B multiple-voting shares plus the 2022 founder share (which floors his voting control near 40% regardless of dilution); $1 salary, equity-paid, no dividend or buyback, with the 2023 Flexport logistics divestiture as the observable capital-allocation course-correction.

Shopify Inc. supporting analysis · disclaimers · glossary

Bear $55.23 Base $88.38 Bull $150.26

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

1 **The de-rate corrected an excess, it didn't create a bargain.**
Down ~30% YTD, but ~30x forward / ~67x trailing FCF still prices the win — the modal DCF is ~-18%; the premium on 34% growth is the constraint.

2 **The GAAP net loss is not the earnings signal.**
The -$581M Q1 net loss is a $1,061M non-cash mark on equity investments; ex-that, net income is ~$360M and FCF was +$476M — cash-generative.

3 **Take-rate expansion is the quiet compounder.**
Shopify Payments is already 67% of GMV, and attach (Installments, Tax, Capital) lifts revenue per dollar of GMV — monetization is rising.

4 **Agentic commerce is the same variable for the bull and the bear.**
AI traffic +8x and AI orders +15x YoY could make Shopify the merchant rails for AI agents (bull) or route around the storefront (bear) — opposite signs.

5 **Net cash, p_fail ~0.**
~$5.8B cash, no debt, ~$2.0B FCF and a $2B buyback — no solvency risk; the downside is the multiple and the AI-distribution question, not survival.

FALSIFICATION TRIGGERS

Bull validation

GMV growth holds 30%+ for 4+ quarters · take-rate (revenue / GMV) keeps rising as Payments climbs past 67% · AI-agent orders scale into a material GMV channel · FCF margin expands toward 25-30%

Bear validation

GMV growth decelerates below ~15% on a soft consumer · take-rate flattens as Payments penetration tops out · AI agents transact around merchant storefronts (GMV per merchant stalls) · FCF margin stops inflecting

Reframe needed

if agentic commerce demonstrably disintermediates the storefront - AI-agent GMV grows but bypasses Shopify's rails - re-rate the terminal toward a commoditized back-end multiple, not a distribution-moat platform

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

GMV — Gross merchandise volume - the total dollar value of orders processed across all Shopify merchants (~$100.7B/+35% in Q1); the top-of-funnel volume that take-rate monetizes.

Agentic commerce — Transactions initiated by AI shopping agents (ChatGPT, Copilot, Gemini) - the swing factor: it either makes Shopify the merchant rails for AI shopping or disintermediates the storefront.

Take-rate — Revenue earned per dollar of GMV; rising as Shopify Payments (67% of GMV) and attached services (Installments, Tax, Capital, Markets) monetize more of each transaction - the quiet compounder.

FCF margin — Free cash flow / revenue (~17% FY25, ex-SBC owner FCF; SBC ~4-5%); the mature-DCF swing factor - whether GMV growth and take-rate expansion convert into expanding free cash flow.

Merchant vs Subscription solutions — The two segments: Merchant solutions (~76% of revenue, take-rate-driven) and Subscription solutions (recurring SaaS MRR, ~$212M/+16%); the mix is shifting toward lower-margin Merchant.
