Uber Technologies

$70.40

NYSE : UBER · Mature-Company DCF

$145B mkt cap · 2.04B sh · $2.7B cash, zero debt · ~$2.7B net cash; ~2.04B shares; $20B buyback authorization (2025); Revenue $52B / gross bookings $193.5B FY25 (+19% GB); $9.76B FCF (+40% YoY), ~14x EV/FCF; Down ~30% from highs on AV fear; ads >$2B run-rate, Uber One ~50M members

THE CENTRAL QUESTION

Is Uber a dominant FCF-inflecting mobility/delivery network at ~14x EV/FCF — or does autonomy commoditize its driver-marketplace and erode the network toll?

Uber trades at ~$145B (≈$70/sh, down ~30% on AV fear) — ~14x EV/FCF on $9.76B FCF (growing 40%+), $193.5B gross bookings (+19%), net cash and a $20B buyback. The mature DCF asks whether the two-sided network + advertising (>$2B run-rate) + delivery-margin ramp compound, or whether Waymo/Tesla bypass the marketplace. The finding: at 14x FCF for a network compounding GB ~mid-teens with expanding margins, the modal case implies meaningful undervaluation — but a genuine AV-disruption ultra-bear is -44%, so the sign is a bet on Uber remaining the AV demand-aggregator.

PROBABILITY-WEIGHTED EXPECTED VALUE

$104.27 expected fair value today

+48.1% vs spot $70.40

FORWARD COMPOUNDED VALUE

+5y	+10y	+15y	+20y
$163.54	$256.72	$403.31	$634.11

Uber Technologies scenario narratives

PROBABILITY WEIGHTS

Ultra Bear 15% Bear 27% Base 33% Bull 18% Ultra Bull 7% · Weighted expected $104.27 (+48.1% vs spot)

ULTRA BEAR $39.73

-43.6% vs spot

Probability 15%

AV bypasses the marketplace; toll erodes.

WHY 15%

The autonomy paradox bear: Uber's biggest hedge (platform for all AVs) is its biggest vulnerability if a winning fleet goes direct. 15% weight on real disruption.

WHAT HAPPENS

Waymo/Tesla scale direct-to-consumer robotaxi fleets that don't need Uber's demand layer, and driver reclassification raises the labor-cost base. Gross bookings stall and the take-rate toll compresses.

DCF ~$40 (-44%) — the network's value collapses if it's disintermediated from the supply side.

BEAR $74.74

+6.2% vs spot

Probability 27%

AV pressure; growth decelerates.

WHY 27%

AV pressure + regulation + competition decelerate the network without breaking it. 27% weight as the 'contested but intact' path.

WHAT HAPPENS

AV uncertainty and competition slow GB to mid-single digits and cap margin expansion; Uber stays profitable but the network thesis is contested.

DCF ~$75 (+6%) — roughly fair; the FCF defends the floor while the AV question hangs over the multiple.

BASE $109.49

+55.5% vs spot

Probability 33%

Stays the AV aggregator; ads + delivery margin.

WHY 33%

Uber stays the AV demand layer (Waymo productivity data supports it) and ads/delivery margins compound. 33% as the central outcome.

WHAT HAPPENS

The modal path: Uber remains the demand aggregator for AV fleets, advertising scales past $3B, delivery margins converge toward mobility's, and GB compounds low-double-digits at a rising FCF margin.

DCF ~$110 (+55%). At 14x FCF the market over-discounts the AV threat relative to the network's durability and the FCF ramp.

BULL $154.85

+120.0% vs spot

Probability 18%

Network holds; ads scale; AV accretive.

WHY 18%

AV becomes a tailwind (Uber as the aggregator for cheaper AV rides) + ads scale. ~18%; the productivity data hints at it.

WHAT HAPPENS

The network power holds, AV partnerships prove accretive (cheaper rides expand the TAM), advertising + Uber One drive a software-like margin mix, and GB compounds mid-teens.

DCF ~$155 (+120%) — the FCF machine re-rates as the AV fear proves overblown.

ULTRA BULL $201.73

+186.5% vs spot

Probability 7%

The AV demand layer; advertising platform.

WHY 7%

Uber is the demand layer every AV fleet needs + a major ad platform. ~7%, the asymmetric upside the AV-discounted entry is buying.

WHAT HAPPENS

Uber becomes the indispensable demand/marketplace layer for the entire AV ecosystem plus a >$10B advertising platform, compounding GB high-teens at peak margins.

DCF ~$202 (+187%) — the platform-for-all-autonomy outcome; ~7% probability.

Sources: Uber FY2025 results (revenue $52B, GB $193.5B, adj EBITDA $8.73B, FCF $9.76B), Q1'26 (GB +25%). Revenue as a growth-rate path off FY25 (or GB x ~27% take); FCF = revenue x FCF margin; Gordon terminal. Equity stakes (Aurora ~$1.4B) immaterial → no SOTP. EV/FCF vs DASH/LYFT.

Uber Technologies 7 Powers · the moat, scored

Bear $74.74 Base $109.49 Bull $154.85

Arena. Global mobility + delivery — Uber (two-sided rides + eats network, ads, Uber One) vs Lyft (rides), DoorDash (delivery), and the autonomous-vehicle stack (Waymo, Tesla); defending a network Power whose driver-supply side autonomy could commoditize.

POWER AUDIT
dominant-power durability: medium-high

POWER AUDIT · 7 POWERS

Power	Score	Rationale
Scale Economies	3/3	Largest GB base spreads fixed tech/insurance/support; data + routing density.
Network Economies · thesis leans here	3/3	The dominant Power: two-sided liquidity flywheel, deepest marketplace globally.
Counter-Positioning	1/3	Was the disruptor; AV-native players could counter-position against the human-driver model.
Switching Costs	2/3	Uber One (~50M, ~half of GB) + cross-product habit; real but not deep.
Branding	2/3	'Get an Uber' verb; default global ride-hail brand.
Cornered Resource	1/3	No durable exclusive asset; the AV stack is the cornered resource Uber lacks (Waymo/Tesla have it).
Process Power	2/3	Matching/pricing-algorithm + multi-product operational edge.

PEER SET

Waymo (Alphabet) · n/a
AV leader; runs on Uber in Austin/Atlanta but separating in Dallas/SF — partner turning competitor.

Tesla · n/a
Camera-only robotaxi bet; could go direct-to-consumer and bypass the marketplace.

DoorDash 27% gr · ~25x EV/EBITDA
US delivery leader; richer EV/EBITDA, faster GOV growth.

Lyft 15% gr · 3% mgn · sub-scale
Distant #2 in US rides; sub-scale margin.

THREAT VECTORS · FALSIFIERS

Network Economies · Waymo/Tesla direct-to-consumer AV
falsifier: A major AV fleet scales D2C robotaxi without Uber's demand layer.

Counter-Positioning · Driver reclassification
falsifier: A major-jurisdiction gig-worker ruling structurally raises the labor-cost base.

Scale Economies · DoorDash / Lyft competition
falsifier: DoorDash extends its delivery lead or Lyft regains rides share, compressing take rate.

> COMPETITIVE READ
> Uber's network economies + scale are genuinely dominant — the deepest two-sided marketplace, now throwing off ~$10B FCF with advertising and delivery margins still ramping. The entire terminal-value debate is the autonomy paradox: the network power is durable only if Uber remains the demand aggregator for AV fleets. At ~14x EV/FCF the market is pricing meaningful AV-disruption risk; the sign of the memo hinges on whether autonomy commoditizes the driver-supply side (ultra-bear -44%) or Uber tolls the cheaper AV rides (base +55%).

Uber Technologies People · Opportunity · Context · Deal

Bear $74.74 Base $109.49 Bull $154.85

Underwrite the position the way a venture investor underwrites a round — across all four legs, public or private. **People** is the leg scored here (observable only); Opportunity, Context and Deal cross-reference the rest of the memo.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Dara Khosrowshahi

8 yrs in seat

3% insider ownership

LOW key-person risk

Capital allocation (realized)
The standout leg: turned to GAAP profit (FY2023, first ever) and ~$6.9B FY2024 free cash flow, then opened capital return — a first $7B buyback (Feb 2024) escalated to a $20B authorization (Aug 2025, ≥50% of FCF). Divested the cash-burning bets (self-driving → Aurora; air taxi → Joby; bikes → Lime); legacy Didi/Grab stakes run down. (FY2024 GAAP net income was flattered by a ~$6.4B tax-valuation release.)

Incentive alignment
Pay is PSU/PRSU-weighted (multi-year metrics: gross bookings, operating income, AV partnerships); FY2024 ~$39.4M, the jump driven by share-price appreciation on already-granted awards, not a structural raise. Pay-for-performance, equity-led.

GOVERNANCE FLAGS

- single-class (one share, one vote) — super-voting eliminated in 2017 (pre-IPO, a SoftBank condition)
- separate independent chair (Ronald Sugar) vs CEO; majority-independent board
- founder Travis Kalanick fully exited (board + entire stake, Dec 2019); SoftBank overhang cleared
- low insider ownership (Dara ~0.07%; aggregate ~3-4%) — institutionally dispersed

THE FOUR LEGS

People — observable composite · 1–5 — ●●●●○

Opportunity
§6c scenarios · Page-3 business snapshot · §13 AI (UBER 4.72)

Context
§6d 7 Powers (Power Audit)

Deal
Open-market purchase = the deal: entry price vs. the §6c scenario distribution (the +48% finding) + §12 sizing.

> PEOPLE READ
> The professionalized-after-the-founder case: a hired CEO who turned Uber to free cash flow and a $20B buyback regime, on a clean single-class register with an independent chair and no controller — the structural opposite of a founder-control name. The only real demerits: low insider skin-in-the-game and some execution-continuity tied to Dara.

Uber Technologies supporting analysis · disclaimers · glossary

Bear $74.74 Base $109.49 Bull $154.85

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

1 **~14x EV/FCF on $9.76B FCF growing 40%+.**
A dominant two-sided network priced at a mid-teens FCF multiple while FCF is still inflecting steeply — the AV fear is doing the discounting.

2 **Advertising is the hidden high-margin lever.**
>$2B run-rate, +50%, near-100% incremental margin — the single biggest take-rate/margin-expansion driver, embedded in the segments.

3 **Uber One + multi-product flywheel.**
~50M members driving ~half of gross bookings; rides+eats+ads on one app deepen switching costs.

4 **AV could be a tailwind, not just a threat.**
Waymo on Uber outproduced 99% of human drivers; Uber's aggregator strategy + ~$10B AV commitments position it as the demand layer.

5 **$20B buyback, net cash.**
~7% FCF yield funding a large buyback at a depressed multiple — accretive.

FALSIFICATION TRIGGERS

Bull validation
autonomous trips scale on Uber's network profitably · advertising passes $3B run-rate · delivery margin converges toward mobility's 8% of GB · GB stays mid-teens+

Bear validation
a major AV fleet (Waymo/Tesla) scales direct-to-consumer · driver reclassification raises the cost base · GB decelerates to mid-single

Reframe needed
if AV demonstrably disintermediates the driver-marketplace (fleets bypass Uber's demand), re-rate the network durability + terminal toward a commoditized-logistics multiple

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

Gross bookings (GB) — Total value of rides+eats+freight (~$193.5B FY25); revenue is GB x ~27% take rate — the top of the model.

AV / autonomy paradox — Uber's strategy to be the demand aggregator for all AV fleets is also its vulnerability — a winning fleet could bypass the marketplace.

Network economies — Helmer Power: more riders ↔ more drivers → lower wait/price → more riders; the deepest two-sided marketplace globally.

Uber One — ~50M-member subscription driving ~half of gross bookings; the frequency/retention + switching-cost flywheel.

FCF margin — Free cash flow / revenue (~19% FY25, rising); the mature-DCF lever as ads + delivery margin mix up.
