Apple

NASDAQ : AAPL · Mature-Company DCF

$5082.96B mkt cap · 14.78B sh · $54.7B cash, $90.7B debt · Net debt ~$36B ($54.7B cash vs ~$90.7B total debt); ~14.78B shares, shrinking on a fresh $100B buyback + dividend raise; Revenue $416B FY25 (+6%); GAAP op margin ~32%; FCF ~$99B; Services ~$31B/quarter at ~70%+ gross margin; ~$339 (Sep 2026), +33% TTM, +25% YTD; iPhone ~50% of revenue, Greater China reaccelerating (+28%)

22 October 2026 · the qualitative

$343.99

THE CENTRAL QUESTION

Does a mid-single-digit grower at ~50x FCF, with AI outsourced to Gemini and a ~$20B/yr Google-payment cliff, justify a premium the modal can't underwrite?

Apple trades at ~$5.01T (~$339/sh, +33% TTM) - about 50x ~$99B FCF on $416B mid-single-digit revenue, with ~$36B net debt. Services compounds mid-teens at ~70%+ gross margin, but iPhone is still ~50% of revenue, AI is outsourced to Gemini, and the ~$20B/yr Google search payment faces a DOJ rebid. The DCF resolves whether quality justifies the multiple: weighted -43.8%, modal ~$188 (-45%).

Apple scenario narratives

PROBABILITY WEIGHTS

Ultra Bear 13% Bear 27% Base 33% Bull 19% Ultra Bull 8% · Weighted expected $190.57 (-44.6% vs spot)

ULTRA BEAR — $89.39

-74.0% vs spot

Probability 13%

iPhone stalls; Services tails crystallize.

WHY 13%

The genuine bear: iPhone is ~50% of revenue and partly pulled forward, the search payment must be rebid annually under the DOJ ruling, and App Store fees face regulatory pressure on two continents. 13% weight on the tails crystallizing together.

WHAT HAPPENS

The hardware engine flattens and the twin regulatory tails land: iPhone revenue stagnates as the upgrade super-cycle pays back, the ~$20B/yr Google search payment is cut or competed away, and EU/US App Store fee erosion bites high-margin Services. Revenue grows ~2%/yr and FCF margin compresses toward ~20% as the mix shifts away from the most profitable dollars.

A flat hardware franchise losing its richest Services rents re-rates to a mid-teens FCF multiple — DCF ~$89 (-74%). Net debt offers no cushion here; the de-rate is the multiple meeting the growth.

BEAR — $129.46

-62.4% vs spot

Probability 27%

Low-single-digit growth; multiple compresses.

WHY 27%

Share and ecosystem hold, but mid-single-digit growth can't carry a premium multiple while the search-payment and fee tails hang over Services. 27% as the plausible 'durable but slow' path.

WHAT HAPPENS

Apple keeps the ecosystem but the growth stays muted: iPhone replacement cycles lengthen, Services compounds but off a base partly funded by the at-risk search payment, and tariff/India cost drag (~5-8% premium) trims gross margin. Revenue compounds ~4% at a ~23% FCF margin.

DCF ~$129 (-62%) — a durable but slow-growing franchise at ~19x terminal FCF is worth well below 50x; the gap between today's multiple and mid-single-digit growth is the whole bear.

BASE — $187.74

-45.4% vs spot

Probability 33%

Services compounds; iPhone steady; still rich.

WHY 33%

Requires Services to keep compounding and the iPhone base to stay sticky through the AI-platform shift — consistent with FQ2's record Services and China rebound, but not a re-acceleration. 33% as the central, still-rich outcome.

WHAT HAPPENS

The modal path: Services compounds mid-teens at ~70%+ gross margin on a 2.5B+ installed base, the iPhone 17 cycle and China reacceleration keep hardware steady, and the Gemini-powered Siri keeps users locked in. Revenue compounds ~6% to ~$555B at a ~25% FCF margin, with buybacks shrinking the share count.

DCF ~$188 (-45%) — even crediting durable Services growth and a defended ecosystem, a ~23x terminal FCF multiple lands well below the ~50x paid today; the modal case says the price embeds quality and safety beyond what the cash flows underwrite.

BULL — $279.18

-18.8% vs spot

Probability 19%

AI-era ecosystem deepens; search risk fades.

WHY 19%

Services + the AI-era ecosystem stay sticky, the search payment holds, and China momentum continues — the FQ2 trends extended. ~19% weight on the franchise compounding without the tails biting.

WHAT HAPPENS

The ecosystem wins the AI era on someone else's model: the Gemini-powered Apple Intelligence raises engagement and Services attach, the search payment survives the rebid intact, and the installed base feeds a higher-margin Services mix. Revenue compounds ~8% to ~$600B and FCF margin lifts toward ~27%.

DCF ~$279 (-18%) — even the bull falls short of today's price; an upper-single-digit grower at a sustained high-20s FCF multiple is worth less than spot, not more.

ULTRA BULL — $362.45

+5.4% vs spot

Probability 8%

Services step-change; FCF/share compounds hard.

WHY 8%

Everything compounds — Services AND margins AND buyback leverage AND no regulatory hit — the quality-compounder outcome. ~8%, the long-duration tail that justifies the premium if it lands.

WHAT HAPPENS

The full upside: Services reaccelerates on AI features and new monetization, hardware finds a fresh wedge (wearables, new categories), gross margin holds near 49%, and the ~$100B buyback compounds FCF/share on a shrinking count. Revenue compounds ~10% to ~$640B at a ~30% FCF margin.

DCF ~$362 (+7%) — the only scenario that clears spot, and only if Services takes a genuine step-change and the multiple stays in the low-30s. ~8% probability, the thin upside the premium is paying for.

Apple 7 Powers · the moat, scored

Bear $129.46 Base $187.74 Bull $279.18

Arena. Premium consumer hardware + a high-margin Services ecosystem - Apple vs Samsung/Google (phones), Microsoft/Google (platforms/AI), and the App Store/payments field; auditing a branding + switching-costs Power against the AI-platform shift.

POWER AUDIT
dominant-power durability: high

POWER AUDIT · 7 POWERS

Scale Economies ■■■	Massive purchasing/manufacturing and R&D scale across ~$416B revenue; among the deepest in consumer tech, though not the single dominant Power.
Network Economies ■■□	iMessage/FaceTime/AirDrop and the developer ecosystem create modest network pull, but the lock-in is more switching cost than true network effect.
Counter-Positioning ■□□	Largely the incumbent now; the privacy-and-integration stance differentiates but rivals can and do copy it - not a structural counter-position.
Switching Costs ■■■	Deep ecosystem lock-in: iCloud, App Store purchases, Watch/AirPods/Mac continuity, iMessage - leaving means abandoning a connected device estate; a core durable Power.
Branding ◂ thesis leans here ■■■	The strongest Power: the premium global brand commands pricing power and ~49% gross margin and anchors a 2.5B+ installed base; decades-durable.
Cornered Resource ■■□	In-house silicon (A/M-series) is a real edge and the developer base is sticky, but neither is a fully cornered, irreplaceable resource.
Process Power ■■■	World-class supply-chain and silicon-design execution (Cook's operational machine); a genuine but partly replicable advantage.

PEER SET

Samsung — 5% gr · 10% mgn · ~12x P/E
The premium-Android hardware rival; competes on phones/wearables but lacks Apple's Services ecosystem and margin.

Alphabet (GOOGL) — 15% gr · 32% mgn · ~24x P/E
Owns Android + Gemini; the AI-platform threat and Apple's ~$20B search-payment counterparty all at once.

Microsoft (MSFT) — 13% gr · 45% mgn · ~33x P/E
The other quality mega-cap compounder; the platform/AI peer Apple's multiple is benchmarked against.

Samsung Electronics / Xiaomi — 8% gr · 8% mgn · ~10x P/E
High-volume Android OEMs pressuring iPhone share in China/India at lower price points.

THREAT VECTORS · FALSIFIERS

Switching Costs · The AI-platform shift (Gemini/agent layer)
falsifier: An AI agent layer that disintermediates the iOS interface and erodes ecosystem lock-in - measurable as Services attach/engagement flattening.

Branding · Regulators (DOJ search remedy + EU/US App Store)
falsifier: The ~$20B Google search payment is cut on rebid and App Store fee remedies take hold, draining the highest-margin Services dollars.

Scale Economies · Tariffs + India supply shift
falsifier: Gross margin slips below ~46% as the ~5-8% India cost premium and tariff drag (~$900M/quarter) outrun price.

COMPETITIVE READ

Apple's brand is the strongest single Power in this set - a premium global franchise with ~49% gross margin and pricing power - reinforced by deep ecosystem switching costs and immense scale; durability is high. But the live threat is the AI-platform shift: with Apple Intelligence outsourced to Gemini, the next interface may run on someone else's model, and that same counterparty anchors a ~$20B/yr search payment now exposed to a DOJ rebid. The Powers are durable; the question the DCF presses is price, not moat. A mid-single-digit grower at ~50x FCF carries a premium even the bull (~$279, -18%) can't justify, and the modal case lands ~$188 (-45%).

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Tim Cook

15 yrs in seat

0.1%
insider ownership

LOW
key-person risk

Capital allocation (realized)
Tim Cook has been CEO since August 2011 (founder Steve Jobs died that year). A dated succession is now underway: announced April 2026, effective September 1, 2026, Cook becomes Executive Chairman and John Ternus (SVP Hardware Engineering, a 25-year Apple insider) becomes CEO, with Arthur Levinson moving to lead independent director. Capital allocation is best-in-class scale return: FY2025 ~$89B buybacks + ~$15B dividends (~$105B total), a fresh $100B buyback authorization, against ~$132B cash/securities versus ~$100B debt (~$32B net cash) and ~$35B R&D.

Incentive alignment
Cook's FY2025 total compensation was ~$74M (≈$3M salary, ~$12M cash incentive, ~$57M equity), with the equity majority in performance RSUs tied to relative total shareholder return. Insider selling is routine and pre-scheduled (Rule 10b5-1 / sell-to-cover on RSU vesting). Insider ownership is under 0.1% — normal for a company this size and not a flag.

GOVERNANCE FLAGS

- single class of common stock, one vote per share — no dual-class, no super-voting, no controlling shareholder (largest holders Vanguard ~9%, BlackRock ~8%)
- Chair and CEO are currently separated (independent Chairman Levinson) — a positive
- dated CEO succession: Cook → Executive Chairman and John Ternus → CEO effective September 1, 2026; Levinson → lead independent director (the chair role becomes a non-independent insider at that point)
- 7 of 8 directors independent; all directors elected annually (board not staggered)
- the broadest executive-leadership turnover since 2011 (CEO, COO and CFO all refilled from within in 2025-2026)

THE FOUR LEGS

Context
The 7 Powers analysis (Power Audit)

Deal
Open-market common — entry price weighed against the probability-weighted fair value + position sizing.
-44.6% vs spot $343.99

PEOPLE READ

Clean, shareholder-friendly governance: single-class one-vote stock, no controlling holder, a 7-of-8 independent board, and — uncommon among megacaps — a chair currently separate from the CEO. Key-person risk is low because succession is not just planned but executed: a named internal CEO (Ternus) takes over on a fixed date, every senior role was backfilled from within, and no individual controls the company. The one notch to watch is that the chair becomes a non-independent Executive Chairman (Cook) in September 2026.

NOT INVESTMENT ADVICE · Not from a registered investment advisor · AI-assisted analysis · Author may hold positions · See full disclaimers, page 7

Apple supporting analysis · disclaimers · glossary

Bear $129.46 Base $187.74 Bull $279.18

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

1 **The de-rate is the multiple, not the franchise.**
Apple is a genuine quality compounder, but a mid-single-digit grower at ~50x FCF prices safety beyond growth — even the bull stops at ~$279 (-18%).

2 **The ~$20B Google payment is a discrete cliff.**
It is near-pure-margin Services that must be rebid annually under the DOJ ruling; losing it directly cuts the highest-quality earnings, and the bear/ultra-bear weight it.

3 **AI is outsourced, not owned.**
A custom Gemini behind the revamped Siri (~$1B/yr to Google) makes Apple a fast-follower on foundation models; the bull needs the ecosystem to win the AI era on someone else's stack.

4 **Services + installed base are the quality.**
~$31B/quarter of Services at ~70%+ gross margin on 2.5B+ devices is durable recurring earnings — the base/bull lean on it compounding mid-teens.

5 **iPhone is ~half the revenue and partly pulled forward.**
FQ2 iPhone +22% rode pent-up demand from ~315M users on 4+yr phones; a payback air-pocket is the bear's mechanism once the super-cycle clears.

FALSIFICATION TRIGGERS

Bull validation

Services growth holds mid-teens+ · iPhone upgrade cycle sustains · the Google search payment survives the rebid · gross margin defends ~47%+ · China revenue keeps reaccelerating

Bear validation

Services decelerates below ~10% · the search payment is cut or competed away · EU/US App Store fee remedies take hold · iPhone goes flat-to-down · gross margin slips below ~46%

Reframe needed

if the AI-platform shift cedes the next interface (a Gemini/agent layer that disintermediates iOS) or Services structurally stalls, re-rate the terminal toward a flat-hardware multiple - the ultra-bear's ~16x

Do not make investment decisions on the basis of this document. Consult a licensed financial professional and read the company's official SEC filings (10-K, 10-Q, 8-K, proxy) before forming any investment view. If you wouldn't trust your retirement to a chatbot, don't trust this either.

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

Services — Apple's recurring high-margin revenue (App Store, AppleCare, advertising, payments, subscriptions; ~$31B/quarter at ~70%+ gross margin) on a 2.5B+ device base - the quality engine.

Apple Intelligence — Apple's AI feature set; the revamped Siri runs a custom Google Gemini model (~$1B/yr) - AI partnered, not in-house.

Installed base — The >2.5B active Apple devices that drive Services attach and switching costs; its growth, not unit sales, anchors the mid-teens Services compounding.

FCF margin — Free cash flow / revenue (~24% FY25); whether the grower defends ~70%+-margin Services against the search-payment tails.

Google search payment — The ~$20B/yr Google pays to be the default Safari search engine - near-pure-margin Services that must be rebid annually under the DOJ ruling; a discrete cliff.
