Illumina

NASDAQ : ILMN · $42.72B mkt cap · 151M sh · $1.16B cash, $1.99B debt · ~$0.83B net debt; ~151M shares; ~$700M/yr buyback (no dividend); Revenue $4.34B FY25 (~flat 4yrs; Q1'26 +4.8% re-accel); ~23% non-GAAP op margin, ~70% gross, ~$0.9-1.0B FCF; Tripled off lows on the clinical/NovaSeq-X turnaround; ~8.5x EV/sales, ~36x FCF

Mature-Company DCF

22 October 2026 · the qualitative

$282.86

THE CENTRAL QUESTION

Is Illumina's tripling + ~8.5x EV/sales pricing a durable clinical/NovaSeq-X re-acceleration — or is flat revenue + low-cost-entrant (Ultima/Element) + Roche erosion the reality?

Illumina trades at ~$36B (≈$239/sh, up ~200% off the lows) — ~8.5x EV/sales, ~36x FCF on $4.34B revenue (flat for four years, Q1'26 +4.8%), ~70% gross margin, ~$1B FCF. The mature DCF asks whether the NovaSeq-X consumables pull-through + clinical mix (>65% of sequencing consumables, +20% ex-China) re-accelerate the franchise toward a ~26% margin, against low-cost entrants (Ultima/Element $100 genome), Roche's 2026 SBX re-entry, China decline, and NIH cuts. The finding: the rally has priced past the re-acceleration — no scenario clears spot; the base (modest re-accel) sits ~55% below. The TXG mirror.

PROBABILITY-WEIGHTED EXPECTED VALUE

Illumina scenario narratives

PROBABILITY WEIGHTS

Ultra Bear 12% Bear 30% Base 35% Bull 18% Ultra Bull 5% · Weighted expected $101.53 (-64.1% vs spot)

ULTRA BEAR — $39.59

-86.0% vs spot

Probability 12%

Low-cost entrants + China + NIH crush.

WHY 12%

The bear: the SBS patent estate ages, low-cost entrants design around it, and the academic base shrinks. 12% weight on real erosion.

WHAT HAPPENS

Ultima/Element ($100 genome) compress consumables pricing/share, Roche's SBX re-entry bites, China keeps declining, and NIH cuts freeze research demand. Revenue declines and the consumables annuity erodes.

DCF ~$40 (-83%) — a shrinking franchise losing its pricing Power earns a distressed multiple.

BEAR — $62.91

-77.8% vs spot

Probability 30%

Flat; clinical offsets erosion; rally unwinds.

WHY 30%

Flat revenue (the FY22-25 reality) with clinical offsetting erosion. 30% weight — the rally priced more than this.

WHAT HAPPENS

Clinical growth roughly offsets China + entrant erosion, leaving revenue ~flat at a recovering margin; the franchise is dominant but ex-growth.

DCF ~$63 (-74%) — well below the rallied price; flat revenue can't justify ~8.5x sales.

BASE — $106.30

-62.4% vs spot

Probability 35%

Modest re-accel; NovaSeq-X pull-through; ~26% margin.

WHY 35%

NovaSeq-X pull-through + clinical + the ~26% margin target, consistent with Q1'26's +4.8% and raised guide. 35% as the central outcome — but priced in.

WHAT HAPPENS

The modal path: the NovaSeq-X installed base matures into a consumables acceleration, clinical compounds, and the margin marches to ~26% (management's 2027 target). Revenue grows ~4-5%.

DCF ~$106 (-55%) — even a successful modest re-acceleration can't justify the ~200% rally; the entry has run ahead of the fundamentals.

BULL — $162.15

-42.7% vs spot

Probability 18%

Clinical compounds; multiomics; margin >26%.

WHY 18%

The clinical-led re-acceleration is durable + multiomics adds growth. ~18%; the rally prices even more than this.

WHAT HAPPENS

Clinical sequencing compounds high-single-digits, multiomics/proteomics (SomaLogic) cross-sells, and the margin pushes past 26% as NovaSeq-X pull-through accelerates in 2H'26+.

DCF ~$162 (-32%) — the durable re-acceleration materializes, yet still well below spot.

ULTRA BULL — $230.21

-18.6% vs spot

Probability 5%

Sequencing super-cycle; dominant + multiomics.

WHY 5%

Sequencing super-cycle + ILMN defends its Power. ~5%, and still below spot.

WHAT HAPPENS

A genomics super-cycle (clinical at scale + multiomics) re-accelerates ILMN to low-double-digits at ~30% margins, defending its ~80% share against entrants.

DCF ~$230 (-4%) — the dominant-platform-re-rates outcome; ~5% probability.

Illumina 7 Powers · the moat, scored

Bear $62.91 Base $106.30 Bull $162.15

Arena. DNA sequencing — Illumina (~80% share, NovaSeq-X installed base, ~70%-margin consumables annuity) vs Ultima, Element, Roche (SBX, 2026), PacBio, Thermo, MGI/Complete Genomics; defending a scale + switching Power against low-cost entrants. (Supplies 10x Genomics/TXG; the two are IP litigants.)

POWER AUDIT
dominant-power durability: medium

POWER AUDIT · 7 POWERS

Scale Economies ◂ thesis leans here	~80% share + huge installed base → manufacturing/R&D cost advantage on consumables; the dominant Power.
Network Economies	Published-protocol/citation network is mild.
Counter-Positioning	Incumbent; low-cost entrants counter-position on price-per-genome.
Switching Costs	Validated clinical assays + DRAGEN pipelines on Illumina chemistry won't re-validate cheaply (regulatory friction).
Branding	The 'gold standard' in clinical NGS.
Cornered Resource	Sequencing-by-synthesis patent estate — established but contested/aging (litigated vs Element/BGI).
Process Power	Chemistry/manufacturing learning curve.

PEER SET

Ultima Genomics · private
UG 100, ~$80-100 genome (high-throughput) — the low-cost price attack.

Element Biosciences · private
AVITI + Vitari ($100 30x genome); mutual IP litigation with Illumina.

Roche (SBX) · diversified
Re-entering with sequencing-by-expansion (2026); diagnostics channel — the credible long-term threat.

PacBio / Thermo / MGI · varies
Long-read niche / Ion Torrent / China (MGI blocked from US by BIOSECURE).

THREAT VECTORS · FALSIFIERS

Scale Economies · Ultima / Element ($100 genome)
falsifier: Low-cost entrants take material high-throughput share; consumables pricing compresses.

Cornered Resource · Roche SBX (2026)
falsifier: Roche's SBX gains clinical traction, breaking the SBS franchise.

Switching Costs · NIH / China
falsifier: NIH cuts + China decline shrink the academic installed base the annuity depends on.

COMPETITIVE READ

Illumina's scale + switching-cost Power is genuine and durable — ~80% share, >90% of clinical genomics, a ~70%-margin consumables annuity, and clinical labs that won't cheaply re-validate. But the Power is being audited: revenue was flat for four years, China collapsed, NIH froze research demand, low-cost entrants (Ultima/Element $100 genome) attack pricing, and Roche's SBX re-enters in 2026. The ~200% rally to ~8.5x EV/sales has priced past the NovaSeq-X/clinical re-acceleration; no scenario clears spot, and the modal base sits ~55% below — the entry, not the franchise, is the problem (the TXG mirror).

Illumina People · Opportunity · Context · Deal

Bear $62.91 Base $106.30 Bull $162.15

Underwrite the position the way a venture investor underwrites a round — across all four legs, public or private. **People** is the leg scored here (observable only); Opportunity, Context and Deal cross-reference the rest of the memo.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Jacob Thaysen (CEO since Sept 2023)

2%
insider ownership

LOW
key-person risk

Capital allocation (realized)
Dominated by the GRAIL episode — a major observable value-destruction: bought GRAIL (~$8B, 2021) and CLOSED it without regulatory clearance, drawing an EU prohibition + an unprecedented €432M "gun-jumping" fine (later voided on jurisdiction, 2024) and a forced spin-off (June 2024 → GRAL) that took a ~$4B impairment + a ~$1B recapitalization. No dividend; small buybacks ($1.5B authorized Apr 2026); R&D-heavy.

Incentive alignment
Comp redesigned after a pay revolt: CEO target equity $10M is 70% PSUs / 30% RSUs, PSUs vesting on 3-year relative TSR (the make-whole grant made explicitly 70% TSR-contingent in response to stockholder feedback). Base $1M, target bonus 125%.

GOVERNANCE FLAGS

- single-class, declassified board (annual elections)
- 2023 Icahn proxy fight: chairman John Thompson ousted; Icahn won one board seat
- say-on-pay FAILED 2023 → recovered ~86.5% (2024) after the comp redesign
- board/chair overhaul since (Gottlieb non-exec chair 2025; Corvex Meister joined; Icahn fully exited)

THE FOUR LEGS

People
observable composite · 1–5

Opportunity
The scenario distribution · the business snapshot · the Arthur Indicator (ILMN 11.5)

Context
The 7 Powers analysis (Power Audit)

Deal
Open-market common — entry price weighed against the probability-weighted fair value, then position-sized.
-64.1% vs spot $282.86

> **PEOPLE READ**
> The cohort's governance-turnaround story — and the weakest recent record: a board that closed an $8B deal without clearance (forced unwind, ~$4B impairment, an EU fine), failed say-on-pay (2023), and lost a proxy seat to Icahn. Being repaired — new CEO, independent chair, redesigned TSR-linked pay, say-on-pay recovered, activist oversight — but the track record is the observable flag.

NOT INVESTMENT ADVICE · Not from a registered investment advisor · AI-assisted analysis · Author may hold positions · See full disclaimers, page 7

Illumina supporting analysis · disclaimers · glossary

Bear $62.91 Base $106.30 Bull $162.15

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

1 **~80% share, >90% of clinical genomics.**
Dominant installed base + consumables lock-in (validated clinical assays don't re-validate cheaply) — a real scale + switching Power.

2 **~70% gross margin, ~$1B FCF.**
A razor/blade annuity (consumables ~72% of revenue) with a clear path to a ~26% operating margin (2027 target).

3 **NovaSeq-X pull-through is coming.**
~890 installed (end-FY25); ~6-month pull-through lag → a 2H'26 consumables acceleration the base is just starting to price.

4 **Clinical mix is the durable engine.**
>65% of sequencing consumables, +20% ex-China — less funding-exposed than the academic/research side.

5 **GRAIL overhang is gone.**
Divested Jun 2024; Core-only reporting, EU fine/impairments behind it; new CEO running the cost-out + clinical pivot.

FALSIFICATION TRIGGERS

Bull validation
total revenue growth sustains >6% · NovaSeq-X consumables accelerate (2H'26) · non-GAAP op margin reaches ~26% · clinical stays +20% ex-China

Bear validation
revenue stays flat-to-down · Ultima/Element take material share · Roche SBX gains clinical traction · China/NIH drag deepens

Reframe needed
if a low-cost entrant or Roche SBX structurally breaks the SBS consumables-pricing Power, re-rate toward a commoditized-sequencing multiple

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

Consumables (razor/blade) — Reagents/flow-cells that run on the installed base (~72% of revenue, ~70% margin) — the recurring annuity and the moat.

Low-cost entrants — Ultima (~$80-100 genome) + Element (Vitari) + Roche SBX (2026) attacking the sequencing-by-synthesis franchise on price.

NovaSeq X — Illumina's flagship high-throughput sequencer; its installed-base ramp drives the consumables pull-through (the re-acceleration mechanism).

FCF margin — Free cash flow / revenue (~21% FY25); the mature-DCF lever as the margin marches to the ~26% 2027 target.

Clinical mix — >65% of sequencing consumables, +20% ex-China — the durable, less-funding-exposed demand engine vs academic/research.
