Mature- toward \$125-145B; ~\$567 mid-June 2026: +12.6% YTD but -18% TTM, off the \$796 Aug-2025 high, bounced off the \$520 Mar-2026 low
Company
DCF

\$612.91

THE CENTRAL QUESTION

Does the ~\$130B/yr AI capex earn its cost of capital - lifting ad growth and pricing faster than the D&A compresses Meta's 41% margins?

Meta trades at ~\$1.43T (~\$567, +12.6% YTD but -18% TTM, off the \$796 high) - the cheapest mega-cap on normalized FCF at a high-teens EV/FCF, while Q1'26 ad growth accelerated to +33%. The fork is the capex: guidance jumped to \$125-145B (~2x prior year) and the stock flinched on the ROI question, even as 41% margins fund the buildout. The DCF asks whether AI ad efficiency compounds revenue faster than D&A crushes margins: a weighted +14.6%, modal base ~+8%.

Probability 12%		Probability 27%		Probability 34%		Probability 20%		Probability 7%	
Capex burns; ad growth fades; margins compress.		Growth normalizes; D&A weighs on margins.		AI lifts ads; margins hold ~41%; FCF compounds.		AI ad engine compounds; capex pays off.		AI platform second act; FCF machine.	
WHY 12%		WHY 27%		WHY 34%		WHY 20%		WHY 7%	
The genuine bear: the market already flinched (~6% after-hours) on the capex raise, the ROI is unproven, and Reality Labs has lost ~\$80B cumulatively. 12% weight on the spend failing to convert to durable ad gains.		Share gains and pricing continue but the D&A from ~\$130B/yr capex caps margin and free cash flow. 27% as the plausible 'grows but the spend weighs' path given the elevated-capex regime.		Requires the AI capex to roughly earn its cost of capital while ad growth stays double-digit - consistent with the accelerating Q1'26 ad metrics and 41% margins, but not a step-change. 34% as the central, modestly-positive outcome.		Meta's own AI tools are already in the core ad stack and Q1'26 showed both volume and price accelerating; if that durability holds, the capex earns well above its cost. 20% weight on the buildout becoming a real ad-monetization engine.		Everything works - AI lifts ads AND opens a messaging/agent revenue stream AND the compute becomes a platform asset, the AWS/datacenter-style second act. ~7%, the long-duration tail.	
WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS	
The capex-ROI fear plays out: the \$125-145B buildout lands as years of D&A ahead of return, AI ad efficiency plateaus, the ad cycle softens, and Reality Labs keeps bleeding ~\$24B/yr. Revenue growth decelerates into the mid-single digits and FCF margin compresses toward ~18-20% as depreciation outruns the operating line.		Ad growth normalizes off the +33% spike toward high-single/low-double-digit as the buildout's depreciation steps up, AI lifts pricing but only modestly, and Reality Labs stays a drag. Operating margin holds high-30s and FCF margin sits low-20s as capex stays elevated against a larger D&A base.		The modal path: AI-driven ad efficiency keeps lifting volume and price (the Q1'26 +33% is the first datapoint), revenue compounds low-double-digit toward ~\$300B+, and operating margin holds ~41% as the buildout's returns roughly offset its D&A. FCF margin grinds back from the capex trough toward the mid-20s as capex moderates against a larger base.		The capex pays off: AI ad-creation (Muse Spark, adopters ~8M) and ranking durably lift impressions and price, the buildout's return outruns its D&A, and operating margin expands past 42% as the ad engine scales on the compute. Revenue compounds mid-teens early and FCF margin inflects toward ~30% as capex intensity peaks and rolls over.		The full second act: AI compounds ad monetization across the 3B+ user graph, business-messaging and AI agents open a new revenue stream beyond the core ad TAM, and the compute buildout becomes an owned platform asset. Operating margin pushes mid-40s and FCF margin reaches the low-30s as the spend turns into durable, high-incremental-margin revenue.	
An ad business growing slowly while spending ~2x prior year on uncertain-return compute earns a low-teens terminal multiple → DCF ~\$268 (~53%). Net cash sets a floor but cannot offset a buildout that does not earn its cost of capital.		DCF ~\$415 (~27%) - a still-dominant ad franchise, but one digesting a heavy buildout at a ~16x terminal FCF multiple is worth below today's price; the discount is warranted if the capex weighs on free cash flow longer than the ad engine compounds.		DCF ~\$614 (+8%) - the ad engine compounds and the capex earns roughly its cost of capital, so the modal case recovers to modestly above today's price at a ~20x terminal FCF multiple plus net cash; the cheapest mega-cap on normalized FCF re-rates only gently in the central outcome.		DCF ~\$997 (+76%) - if the AI spend converts to a structurally faster, higher-margin ad engine, the de-rated entry re-rates with the fundamentals at a high-20s terminal FCF multiple; this is the core of the bull and the fat right tail in the finding.		DCF ~\$1392 (+146%) - the buildout reclaims a platform multiple as AI becomes an earnings engine rather than a cost; ~7% probability, the asymmetric upside the de-rated entry is buying.

FY21-FY25 history + FY26-FY30 scenario projections · fiscal years end Dec · Q1 2026 (Apr'26) results

Sources: SEC XBRL company facts (CIK 1326801; revenue, GAAP operating income/margin, cash flow, debt), Meta Q1 2026 release (revenue \$56.3B +33% YoY, ad revenue ~\$55B with impressions +19% & price/ad +12%, operating income \$22.9B at 41% margin, Reality Labs ~\$6B/qtr loss; capex raised to \$125-145B; FTC trial won Nov-2025, appeal Jan-2026). Revenue modeled as a growth path off FY25; FCF = revenue x FCF margin; Gordon terminal at scenario WACC.

Meta Platforms 7 Powers · the moat, scored

Bear \$414.94 Base \$613.68 Bull \$997.31

Arena. Digital advertising / social platforms - Meta (3B+ user social graph, ~\$55B/qtr ads, 41% margin) vs Alphabet/Google, Amazon ads, TikTok/ByteDance, and Snap/Pinterest/Reddit; auditing a branding + network-economies + scale Power against the AI-capex ROI question.

POWER AUDIT
dominant-power durability: high

POWER AUDIT · 7 POWERS

Scale Economies 	Massive: ~\$200B revenue and a global ad/infra base spread fixed R&D and compute across 3B+ users; AI capex deepens the cost-per-impression advantage if it earns out.
Network Economies · thesis leans here 	The core Power: the social graph compounds - more users and content make each app more valuable to users and advertisers; cross-app (FB/IG/WhatsApp) reinforces it.
Counter-Positioning 	Was the mobile-social disruptor; now the incumbent being counter-positioned by TikTok's algorithmic feed, which forced the Reels response.
Switching Costs 	Moderate: social graph + content history + creator relationships create stickiness, but users multi-home and attention is contestable.
Branding 	Real: Instagram/WhatsApp are category-defining consumer brands with global mindshare, though the corporate brand is contested and ad-trust is a perennial overhang.
Cornered Resource 	The 3B+ user behavioral/interest dataset and the social graph itself are hard to replicate; tempered by privacy regulation (DMA, ATT) constraining its use.
Process Power 	AI ad-ranking, creative (Muse Spark) and infra are a compounding learning curve; the open question is whether the capex turns this into durable monetization.

PEER SET

Alphabet (GOOGL) The other ad duopolist - Search/YouTube + full AI stack; the scale/margin benchmark and direct ad-budget competitor.	15% gr · 32% mgn · ~26x EV/FCF
Amazon (AMZN) Fastest-growing large ad platform (retail-media), taking share of performance budgets at the margin.	13% gr · 11% mgn · ~3x EV/sales
ByteDance / TikTok The attention threat that forced Reels; algorithmic short-form competing directly for engagement and ad dollars.	· private
Snap / Pinterest / Reddit Sub-scale social-ad peers; pressure on incremental ad budgets, not the core graph.	15% gr · 8% mgn · ~5x EV/sales

THREAT VECTORS · FALSIFIERS

Network Economies · ByteDance / TikTok (attention) falsifier: Family DAP growth stalls or turns negative as engagement and time-spent shift to short-form rivals, capping the impression base.
Process Power · AI-capex ROI (Alphabet's full stack) falsifier: Ad growth decelerates while D&A from the ~\$130B/yr buildout keeps climbing - the spend fails to convert to durable monetization.
Cornered Resource · Privacy regulation (DMA, ATT, FTC appeal) falsifier: EU 'pay or consent' / signal-loss erodes ad targeting and pricing, or the FTC appeal reopens the structural-separation risk.

COMPETITIVE READ

Meta's network-economies Power is genuinely durable (high): the 3B+ social graph compounds, reinforced by scale across a ~\$200B ad base and the Instagram/WhatsApp brands - and Q1'26's accelerating ads show the engine isn't decelerating. The Audit: network economies dominates, scale and branding reinforce it, and the live threats are TikTok's pull on attention, privacy regulation, and above all the ~\$130B/yr AI-capex ROI. The market prices that capex fear - the cheapest mega-cap on normalized FCF at a high-teens EV/FCF - so the DCF tests whether AI lifts ads faster than the D&A weighs: a weighted +14.6%, base ~+8%, a fat right tail.

Meta Platforms People · Opportunity · Context · Deal

Bear \$414.94 Base \$613.68 Bull \$997.31

Underwrite the position the way a venture investor underwrites a round — across all four legs, public or private. **People** is the leg scored here (observable only); Opportunity, Context and Deal cross-reference the rest of the memo.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Mark Zuckerberg · founder-led 22 yrs in seat

14% insider ownership
HIGH key-person risk

Capital allocation (realized)
Turned shareholder-return on aggressively: a \$50B buyback authorization (Feb 2024) on top of prior programs, with ~\$29.75B of Class A repurchased in FY2024 (and ~\$23B in H1 FY2025 alone), plus the first-ever dividend (\$0.50/quarter, initiated Feb 2024; ~\$5.07B FY2024 incl. dividend equivalents). M&A built the franchise (Instagram 2012, WhatsApp 2014, Oculus 2014); subsequent deals drew FTC/antitrust scrutiny. Heavy R&D/capex — large multi-year AI/datacenter spend and the Reality Labs segment running deep operating losses. SBC ~\$16.7B FY2024 (+19% YoY).

Incentive alignment
Pay is not the alignment lever — the founder stake is: FY2024 salary was \$1 (by his request), \$0 bonus, \$0 new equity; reported other compensation (~\$27.2M) is overwhelmingly personal security and aircraft costs, not incentive pay. No PSU/TSR program for the CEO (he takes no equity grants).

GOVERNANCE FLAGS

- super-voting dual-class (Class B = 10 votes vs Class A = 1) → ~61% founder voting control on ~14% economics
- Zuckerberg owns ~99.8% of Class B — voting control is non-dilutable by outside Class A issuance
- combined Chair + CEO (founder holds both roles)
- controlled company under Nasdaq rules — exempt from majority-independent-board requirements (Meta opts in anyway; board majority-independent)
- no independent shareholder check — the controller carries every shareholder vote

PEOPLE READ

Founder-Chair-CEO with ~14% economics but ~61% non-dilutable voting control via Class B (10:1) — outsiders cannot force change and every shareholder vote is pre-decided. Aligned through the stake (not pay: \$1 salary, \$0 equity) and aggressive returns (a \$50B buyback + the 2024 first-ever dividend), but the governance offsets stack: super-voting control, combined Chair/CEO, and controlled-company status.

Meta Platforms supporting analysis · disclaimers · glossary

Bear \$414.94 Base \$613.68 Bull \$997.31

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

- 1

Cheapest mega-cap on normalized FCF.
-18% TTM to a high-teens EV/FCF while ad revenue accelerates to +33% - priced as if the ad engine were decelerating.
- 2

The capex ROI is the whole question.
~\$130B/yr spend (~2x prior year) with uncertain return is the bear; Q1'26's accelerating volume AND price is the first datapoint.
- 3

41% margins self-fund the buildout.
Meta pays for the AI capex out of operating cash flow at a 41% margin while still buying back ~\$26B + paying ~\$5B dividends.
- 4

AI is already monetizing in the core ad stack.
Proprietary Muse Spark ad-creative and AI ranking are live; adopters doubled to ~8M, with impressions +19% and price/ad +12% Q1'26.
- 5

Breakup risk is materially reduced.
Meta won the FTC antitrust trial (Nov-2025) and keeps Instagram/WhatsApp; the Jan-2026 appeal leaves a tail, not the breakup case.

FALSIFICATION TRIGGERS

Bull validation

ad revenue stays >=20% with BOTH impressions and price/ad rising · operating margin holds >=40% through the D&A step-up · FCF margin inflects above ~25% as capex peaks · AI-ad adoption keeps compounding

Bear validation

ad growth decelerates into the mid-single digits · operating margin falls below ~38% as D&A outruns operating · FCF margin stuck near ~20% as capex keeps stepping up · Reality Labs loss widens beyond ~\$24B/yr

Reframe needed

if the ~\$130B/yr capex visibly fails to earn its cost of capital - ad growth fades while D&A keeps climbing - re-rate the terminal toward a slow-growth, capex-heavy ad utility

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

Family of Apps — Meta's core ad business - Facebook, Instagram, WhatsApp, Messenger (~99% of revenue, 41%+ margin); the social-graph ad engine the DCF rests on.

Reality Labs — The AR/VR/metaverse segment (~\$24B/yr operating loss, ~\$80B cumulative); a structural drag on margin and the bear's concrete cost line.

AI capex / ROI — The \$125-145B FY26 buildout (~2x the prior ~\$72B) of AI compute; whether it earns its cost of capital via faster, higher-priced ads is the biggest swing.

Impressions x price/ad — The two ad-revenue drivers (Q1'26 +19% volume, +12% price); AI lifting both is the bull mechanism, a soft cycle the bear.

FCF margin — Free cash flow / revenue (~23% FY25, down from ~33% as capex stepped up); the swing factor - whether the buildout converts to FCF as D&A scales.
