NASDAQ : GRAL ·
Young-Company DCF
(Damodaran)

\$3.1B mkt cap · 44M sh · \$823M cash, zero debt · \$0.823B cash, no debt; ~43M shares (low float); Illumina holds ~12.5%;
Revenue-generating: \$147M FY25 (+17%), Galleri self-pay; burn ~\$300M/yr (~2.5yr); NHS-Galleri missed primary endpoint
(Feb'26); FDA PMA filed; Medicare law signed

\$73.00

THE CENTRAL QUESTION

Does ~\$3B / ~20x sales price GRAIL's multi-gate regulatory option fairly — after the NHS-Galleri miss, but with the FDA filing and Medicare law in hand?

GRAIL trades at ~\$3B (~\$73/sh on just ~43M shares) on ~\$147M FY25 revenue and ~\$823M cash. Galleri — a blood test for 50+ cancers, self-pay today — is a multi-gate regulatory option: FDA PMA (filed Jan 2026) → Medicare coverage (signed Feb 2026; ≥2028) → broad adoption. The shape is unusual: the pivotal NHS-Galleri trial MISSED its endpoint (-50% stock), but the FDA filing rests on the positive PATHFINDER 2 and the Medicare law passed — partly broken, partly de-risked. The finding: at \$73 the market roughly prices the modal regulatory-success case, with FDA-rejection downside and broad-adoption upside about balanced.

PROBABILITY-WEIGHTED EXPECTED VALUE

WEIGHTING RATIONALE

Ultra Bear 20% FDA rejects; no coverage; near-total loss.

Bear 28% FDA late; Medicare narrow; sub-scale; low teens.

Base 34% FDA 2027 + Medicare 2028; leader; ≈ spot.

Bull 13% Broad adoption; category leader; ~3×.

Ultra Bull 5% MCED standard of care; dominant; ~6×.

Bull (13%) + Ultra Bull (5%) together contribute \$50.75 — 64% of the \$79.54 expected value despite 18% combined probability. Today's spot (\$73.00) sits 8% below the weighted expected; forward-weighted value crosses spot between +5y and +10y.

ULTRA BEAR	\$1.69	BEAR	\$12.82	BASE	\$73.13	BULL	\$219.48	ULTRA BULL	\$444.35
	-97.7% vs spot		-82.4% vs spot		+0.2% vs spot		+200.7% vs spot		+508.7% vs spot
Probability 20%		Probability 28%		Probability 34%		Probability 13%		Probability 5%	
FDA rejects; no coverage; self-pay niche.		FDA late; Medicare narrow; modest volume.		FDA 2027 + Medicare 2028; category leader.		Broad adoption; annual-repeat screening.		MCED standard of care; GRAIL dominant.	
WHY 20%		WHY 28%		WHY 34%		WHY 13%		WHY 5%	
The NHS-Galleri miss is a real, fired datapoint — the only RCT of any MCED failed its stage-shift primary endpoint, hardening FDA and payer skepticism. 40% within-scenario failure reflects genuine PMA-rejection risk. 20% scenario weight.		FDA approves but adoption disappoints — Medicare narrow, private payers await mortality proof, ASP compresses. 22% failure probability. 28% weight as a very plausible 'approved but sub-scale' outcome.		Requires FDA approval (on PATHFINDER 2, which was positive) + Medicare activation (the law is already signed) + broad coverage — the machinery is in motion. 12% failure probability. 34% weight as the central, modal outcome.		A chain: clean FDA + Medicare + broad private coverage + annual-repeat adoption + category leadership. Each plausible at 50-70%; jointly ~13%. GRAIL's breadth and only-RCT dataset are the edge.		Tail of tails: MCED standard of care + eventual mortality proof + GRAIL dominance + premium terminal. Individually 40-60%; jointly ~5%. The asymmetric upside the ~43M share count amplifies.	
WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS	
The FDA PMA is rejected or stalled — the NHS-Galleri primary-endpoint miss (no significant stage III+IV reduction) hardens FDA/USPSTF skepticism about clinical utility, and Galleri stays a self-pay LDT niche. Test volume plateaus, the Medicare benefit never activates (it is gated on FDA approval), and GRAIL burns its ~\$823M cash defending the franchise.		The FDA approves but late, and Medicare coverage arrives narrow and slow; private payers wait for the mortality data the NHS trial did not deliver. Galleri reaches modest reimbursed volume (~\$1B revenue by 2035) at thin-but-improving margins — a real test, sub-scale economics.		The modal path: the FDA approves Galleri (~2027) on the PATHFINDER 2 evidence, Medicare coverage activates (~2028), and broad private coverage follows — Galleri becomes the leading reimbursed MCED test at ~\$2.6B revenue by 2035 (~10% of a ~\$25B screening market) at ~30% operating margins.		The bull: FDA + Medicare clear cleanly, broad private coverage and annual-repeat screening take hold, and GRAIL extends its first-mover, broadest-test, only-RCT-dataset lead — ~\$4.5B revenue by 2035 at ~36% operating margins. The screening category compounds and GRAIL leads it.		The tail: MCED becomes standard of care, the extended NHS follow-up eventually shows a mortality benefit, and GRAIL is the dominant platform — ~\$6.8B revenue by 2035 at ~40% margins with a premium terminal.	
With a 40% within-scenario failure probability and revenue stalled near \$0.3B, the equity collapses toward the cash-and-distress floor — a near-total loss from today's \$73.		The DCF lands in the low teens — well below spot. This is the 'approved, but adoption disappoints' world the NHS miss makes plausible.		DCF ~\$82/share — roughly today's price. The market is pricing this modal regulatory-success case; the small ~50M share count makes the per-share value swing hard on each gate.		DCF ~\$232/share — ~3× today's price. This is the scenario the regulatory machinery (PMA filed + Medicare law) keeps alive despite the NHS miss.		DCF ~\$457/share — ~6× spot. The asymmetric upside the low share count amplifies; individually each gate is plausible, jointly ~5%.

Sources: GRAIL Q1 2026 10-Q (cash \$0.823B), FY2025 results (\$147M revenue, net loss), NHS-Galleri (primary endpoint missed Feb'26) + PATHFINDER 2 (positive) readouts, FDA PMA filing, Medicare MCED Coverage Act. Revenue modeled as reimbursed test volume x ASP; FCF NOL-shielded pre-tax over the window (documented simplification). TAM: MCED screening serviceable slice, ~\$25B annual by FY35.

GRAIL 7 Powers · the moat, scored

Bear \$12.82 Base \$73.13 Bull \$219.48

Arena. Multi-cancer early detection (MCED) blood screening — GRAIL (Galleri, 50+ cancers, only RCT) vs Exact Sciences (Cancerguard + Cologuard cash engine), Guardant (Shield, FDA-approved CRC → MCED), Freenome, Delfi; the race to originate the first FDA-approved, reimbursed MCED franchise.

POWER ORIENTATION
origination window: open

POWER ORIENTATION · 7 POWERS

Scale Economies	A reimbursed-volume cost curve is future; today's self-pay volume is sub-scale.
Network Economies	No network flywheel yet; data scale is the closest analog.
Counter-Positioning	Galleri's 50-cancer breadth + build-own dataset is hard for single-cancer (Shield CRC) entrants to mirror without their own large trials.
Switching Costs	Provider-ordering and EHR integration build mild lock-in; early.
Branding	The MCED category-definer brand; strong but dented by the NHS miss.
Cornered Resource · thesis leans here	The only randomized MCED dataset (NHS ~140k) + first PMA + largest commercial test base — the strongest, if contested, origination asset.
Process Power	Assay + bioinformatics pipeline is real but not a demonstrated durable process edge.

THE RACE · NAMED RIVALS

Exact Sciences	~\$3B-rev co.; self-funded
~25% terminal share · Cancerguard MCED (LDT, launched 2025) funded by the profitable Cologuard franchise; huge commercial muscle.	
Guardant Health	~\$700M-rev co.
~22% terminal share · Shield FDA-approved for CRC (Medicare \$1,495); extending to MCED (Breakthrough Device).	
Freenome	\$1.35B private
~10% terminal share · CRC-first → multi-cancer; ~\$1.35B raised (Roche, T. Rowe).	
Delfi Diagnostics	Merck GHI + rounds
~5% terminal share · FirstLook Lung (fragmentomics); niche, lung-first.	

LEAD / LAG · FALSIFIERS

MCED clinical evidence (RCT)	NHS ~140k (only RCT; primary missed) vs none randomized	LEADING
FDA approval	PMA filed (decision 2026-27) vs Guardant Shield approved (CRC)	ROUGHLY LEVEL
Reimbursement / commercial scale	self-pay; Medicare gated to 2028 vs Exact Cologuard reimbursed engine	LAGGING

COMPETITIVE READ

GRAIL is originating the MCED category — the broadest test (50+ cancers), the only randomized dataset, and the first PMA — but the NHS-Galleri primary-endpoint miss dented the 'proven population benefit' narrative, and Exact (Cologuard cash engine) and Guardant (FDA + Medicare in CRC) are scaling MCED behind it. The origination window is open but closing: GRAIL must convert the PMA into approval + Medicare coverage before better-capitalized rivals scale, and the extended NHS mortality follow-up is the falsifier that could reopen — or close — the whole thesis.

GRAIL supporting analysis · disclaimers · glossary

Bear \$12.82 Base \$73.13 Bull \$219.48

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

- 1

Only randomized MCED dataset.
The NHS-Galleri RCT (~140k) is the largest, only randomized MCED dataset — a cornered resource even after the primary-endpoint miss (stage IV fell -14%; mortality follow-up extended).
- 2

FDA filing rests on PATHFINDER 2, not NHS.
The PMA is built on the positive PATHFINDER 2 (69.8% sensitivity for the 12 deadliest, 99.6% specificity) plus the NHS prevalent round — not the failed late-stage primary.
- 3

Medicare law already signed.
The MCED coverage benefit is law (Feb 2026); coverage is gated on FDA approval and earliest 2028, but the legislative risk is retired.
- 4

Cash-funded into the coverage window.
~\$823M and burn halved to ~\$300M/yr funds GRAIL into the ~2028 Medicare window without an imminent raise.
- 5

Tiny share count amplifies the unlock.
~43M shares means a reimbursed-volume inflection moves per-share value hard — the asymmetry cuts both ways.

FALSIFICATION TRIGGERS

Bull validation FDA PMA approval (2026-27) · Medicare NCD activates (~2028) · broad private coverage · test volume sustains >40% growth	Bear validation PMA rejected/delayed · Medicare coverage narrow or post-2028 · private payers demand mortality data	Reframe needed if the extended NHS follow-up shows a mortality benefit, the clinical-utility debate resolves and the bull/ultra weights rise materially

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

Galleri — GRAIL's blood test screening for 50+ cancers from one draw; sold self-pay (~\$949) today as an LDT, FDA PMA filed Jan 2026.	MCED — Multi-cancer early detection — blood-based screening across many cancer types; a new category GRAIL pioneered.	NHS-Galleri — The ~140k-participant UK randomized trial; missed its stage-shift primary endpoint (Feb 2026) but cut stage IV; mortality follow-up extended.
PMA / NCD — FDA Premarket Approval (filed Jan 2026) and Medicare National Coverage Determination (earliest 2028) — the two gates to reimbursed scale.	Sales-to-capital (s2c) — Damodaran reinvestment efficiency — incremental revenue per dollar of reinvested capital.
