

Joby Aviation

NYSE : JOBY · Young-Company DCF (Damodaran)

\$8.84

\$8.7B mkt cap · 984M sh · \$2.5B cash, zero debt

THE CENTRAL QUESTION

Will Joby capture meaningful share of a \$250B global UAM TAM by 2036 — or is today's \$10B market cap pricing certainty that competitive eVTOL economics don't support?

Joby trades at ~\$10.3B against \$24M of Q1 2026 revenue and \$700M annualized cash burn. The \$2.5B cash position (post Feb 2026 \$1.2B raise) provides ~3 years of runway. FAA Type Certification is in Stage 4 (final), Dubai exclusive operations begin in 2026, and the Toyota manufacturing partnership unlocks scale. Pre-revenue category-defining companies present a Damodaran problem: the standard 5-year DCF generates nonsense. The young-company framework asks what mature TAM share is plausible, what terminal margins look like at scale, and what probability of outright failure. Three scenarios, weighted; show your work.

WEIGHTING RATIONALE

- Bear 30%** Aerospace startups historically fail at high rates; SR3 timing slipped industry-wide.
- Base 55%** Modal outcome: Joby + Archer split US with aerospace-blend margins.
- Bull 12%** Compound conditional chain; joint probability lands at 10-15% despite individually plausible pieces.
- Ultra Bull 3%** Tail of tails: dominant global UAM + early autonomous pivot + software-take-rate multiple expansion.

Bull (12%) + Ultra Bull (3%) together contribute \$6.31 — 75% of the \$8.42 expected value despite 15% combined probability. Today's spot (\$8.84) sits 5% above the weighted expected; forward-weighted value crosses spot between +5y and +10y.

Probability 13%		Probability 17%		Probability 55%		Probability 12%		Probability 3%	
eVTOL stalls; cash floors a thin value.		Cert delays; mfg stumbles; China wins.		Joby + Archer split US; 13% margin.		Western eVTOL leader; SaaS margins.		Global UAM dominance; SaaS-take-rate.	
WHY 13%		WHY 17%		WHY 55%		WHY 12%		WHY 3%	
The deepest-failure tail, split from the bear for book-wide consistency. 13% weight reflects genuine certification / manufacturing / unit-economics risk for pre-revenue eVTOL; distinct from the bear in that survival here demands heavier dilution. Within-scenario 48% p_fail; the large cash balance keeps even this tail above zero.		Aerospace startups historically fail at high rates even with funding. SR3 audit timing has slipped industry-wide; Stage 4 final testing routinely extends 12-24 months beyond projections. Manufacturing scaling at Dayton is the hardest unproven part — Tesla took years on Model 3 with mature automotive suppliers. The 17% weight acknowledges that the \$2.5B cash + Toyota manufacturing partnership materially reduce execution risk relative to a typical aerospace startup, but eVTOL unit economics remain fundamentally unproven at fleet scale. Even with strong execution, the category itself could fail to generate profitable demand. Within-scenario 35% p_fail captures Joby-specific bankruptcy; the 30% scenario weight captures the broader 'bear world' where eVTOL economics don't scale even if Joby executes.		Modal outcome given de-risking factors already in place. FAA Type Cert progresses on schedule or slightly delayed; Toyota manufacturing scales incrementally rather than to full 500-aircraft/year; Dubai launches commercially but stays limited in scope; Joby and Archer effectively split the US market based on funding/partnership advantages. The 55% weight reflects that the base case requires the LEAST faith — no breakthrough business model, no dominant competitive position, no breakthrough regulatory cooperation. Just sequential execution on plans largely in motion. Result: real revenue with aerospace-blend operating margins (~13%, peer-set median between regional aviation at 8% and ADAS software at 30%), well below the software-economics framing implicit in today's market cap. Joby reaches commercial scale; the open question is at what margin.		The bull case requires a chain of conditional events: FAA Type Cert on schedule by end-2026 AND Toyota Dayton scales to full 500-aircraft/year capacity by 2028-29 AND Dubai exclusivity template replicates in 3+ countries (Saudi Arabia, India, SE Asia) AND competition narrows (Archer ships meaningfully lower volumes, EHang stays regional to China) AND autonomous flight matures within 5-7 years AND Joby successfully pivots to software-take-rate model on partner aircraft. Even granting 60-70% probability per condition with correlation (i.e., if cert works Toyota probably scales), joint probability lands closer to 10-15%. Conjunctive probability is one of the most reliably underestimated quantities in forecasting — the bull case isn't blocked by any single piece looking unlikely, but by compound dependency. 15% reflects that this is a real possibility, just not central.		Tail of tails: requires every Bull condition to hit AND multiple expansion AND replicate internationally AND early autonomous pivot. Each individually 60-75% probable; joint at 3-5%. Genuine tail captures the scenario where Joby joins the software-aerospace-hybrid giants club.	
WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS	
The deepest tail: Joby's commercial eVTOL ramp stalls (~\$0.82B by FY36) — certification, manufacturing yield or route economics disappoint and adoption never reaches scale, well below the bear's \$1.5B niche.		The pessimistic case is brutal for eVTOL economics. FAA Type Certification slips from 2026 into 2027 or later — the SR3 audit is complete but Stage 4 final testing has historically taken longer than companies project. The Dubai launch is real but on a single route; volume builds slowly. Manufacturing in Dayton scales below the 4-aircraft/month target.		The middle path. FAA Type Certification comes through in late 2026 / early 2027. Joby's Dubai exclusivity through 2032 anchors Middle East revenue, US operations via the eIPP program scale through 2027-28, and the Toyota partnership delivers manufacturing scale at the Dayton facility. By FY36, ~1,400 aircraft and \$7B revenue at 13% operating margin.		The bull case is that Joby becomes the dominant Western eVTOL operator and manufacturer. FAA Type Certification on schedule in 2026 unlocks rapid scaling. The Toyota manufacturing partnership delivers the Dayton facility at full 500-aircraft/year capacity by FY28-29. Dubai exclusivity becomes a template — Joby wins similar long-term operating contracts in Saudi Arabia, India, and Southeast Asia.		The ultra-bull case is that Joby becomes the dominant global UAM platform — not just Western leader. FAA cert on schedule + Toyota Dayton scales + Dubai template replicates in 5+ countries + autonomous flight matures within 5-7 years + Joby pivots successfully to a software-take-rate model on partner-operated aircraft + multiple expansion to aerospace/software-hybrid premium. By FY36 Joby operates 8,000+ aircraft globally, captures 16% of \$250B UAM TAM, and software-take-rate revenue dominates with 35%+ mature margins.	
Surviving the stall requires heavier, more dilutive capital than the bear: successive distressed raises take the share count to ~2.87B (from ~0.9B, ~69% dilution) versus the bear's ~1.5B. Operating EV stays negative with no self-sustaining FCF base.		Cash burn continues at \$700M+ annualized. The \$2.5B cash position lasts ~3 years, but commercial scaling requires far more capital. By FY30 Joby has raised another \$2-3B at progressively lower prices, diluting holders 50%+. Aerospace economics don't reach software-like margins — at scale operating margin tops out around 5%, similar to legacy regional aviation operators.		But the market splinters. Archer is the credible #2 in the US. EHang dominates China. Joby captures 2.8% of \$250B global UAM TAM — meaningful but not dominant. Mature 13% operating margin reflects aerospace economics: better than legacy carriers (5-8%) but well below software (25%+). This is what the Damodaran framework produces with defensible peer-set anchors.		Competition narrows. Archer ships but at lower volumes. EHang remains regional to China. By FY36 Joby operates 4,000 aircraft, generates \$20B revenue, and captures 8% of \$250B global UAM TAM. As autonomous flight capability matures (5-7 years away), Joby pivots to a software-take-rate model on partner-operated aircraft, reaching software-like margins. Mature operating margin reaches 28%.		Compound conditional: each piece individually plausible at 60-75%; joint at 3-5%. Reflected here at 3%. This is the genuine tail — not a 'mild upside,' but the scenario where Joby joins the aerospace/software giants club. Contributes \$2.70 to the \$7.81 weighted expected (\$90 × 3%).

Joby Aviation 7 Powers · the moat, scored

Bear \$0.42 Base \$3.65 Bull \$30.05

Arena. eVTOL / advanced air mobility — Joby vs Archer, Beta, Vertical Aerospace, Eve/Embraer; the race to FAA type certification and commercial air-taxi service.

POWER ORIENTATION
origination window: open

POWER ORIENTATION · 7 POWERS

Scale Economies	Manufacturing scale years away; unit economics unproven.
Network Economies	Vertiport/route network is the eventual moat; not yet originated.
Counter-Positioning	Vertically integrated OEM-plus-operator model legacy aero/airlines can't easily copy.
Switching Costs	No installed base yet; future pilot/fleet lock-in.
Branding	Joby + Toyota/Delta halo; acquired Uber Elevate brand.
Cornered Resource · thesis leans here	Toyota manufacturing partnership + capital; Delta tie-up; FAA cert lead; powertrain IP.
Process Power	Manufacturing learning curve just beginning.

COMPETITIVE READ

Joby leads on certification progress and a Toyota-backed capital/manufacturing position, but the network-economics moat is unoriginated and Archer is close; the window stays open through type certification — the gating falsifier for the whole category.

THE RACE · NAMED RIVALS

Archer Aviation	well-funded; Stellantis
~20% terminal share · United + Stellantis manufacturing + US Army; close behind on cert.	
Beta Technologies	~\$1B+ raised
~12% terminal share · Cargo/eCTOL first; building a charging network.	
Vertical Aerospace	constrained
~8% terminal share · UK; VX4; smaller balance sheet.	
Eve (Embraer)	Embraer-backed
~10% terminal share · OEM heritage + order book; later to fly.	

LEAD / LAG · FALSIFIERS

FAA type certification stage	for-credit testing vs for-credit testing	EVEN
Manufacturing partner	Toyota vs Stellantis	EVEN

Joby Aviation People · Opportunity · Context · Deal

Bear \$0.42 Base \$3.65 Bull \$30.05

Underwrite the position the way a venture investor underwrites a round — across all four legs, public or private. **People** is the leg scored here (observable only); Opportunity, Context and Deal cross-reference the rest of the memo.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

JoeBen Bevirt · founder-led 17 yrs in seat

9.4% insider ownership
MEDIUM key-person risk

Capital allocation (realized)
Founder JoeBen Bevirt has been CEO since founding Joby in 2009. Pre-revenue eVTOL developer: ~\$2.5B cash at Q1 2026 against a ~\$160M/quarter burn, funded by equity, convertible and ATM issuance (~\$1.3B raised in Q1 2026) plus Toyota's ~\$894M of cumulative strategic investment. FAA type certification is at stage 4 of 5, with conforming-aircraft flight testing underway and a type certificate targeted for late 2026. No dividend or buyback (cash is preserved for certification and launch).

Incentive alignment
Bervit's FY2025 compensation was ~\$3.7M with no cash bonus (a cash-preservation policy pays short-term incentives in RSUs), under a 5x-salary ownership guideline and strict anti-hedging/anti-pledging rules. He is aligned via a ~9-12% economic stake (co-founder Paul Sciarra holds another ~5.7%). Insider activity is programmatic 10b5-1 selling, no open-market buying; the company also leases office space from Bevirt-owned entities (~\$0.6M/year).

GOVERNANCE FLAGS

- single class of common stock, one vote per share — no super-voting; the founder's influence tracks his ~9-12% economic stake (notably cleaner than dual-class eVTOL peer Archer)
- Chair and CEO are separated, but the Executive Chairman (co-founder Sciarra) is non-independent — independent oversight runs through the lead independent director (Michael Huerta, former FAA Administrator)
- classified / staggered board (three classes) — an entrenchment feature
- Toyota is simultaneously the largest outside shareholder (~\$894M invested), holds a contractual board seat (Ogawa), and is a key component supplier — concentration plus related-party complexity
- founder-CEO related-party: office space leased from Bevirt-owned entities (~\$0.6M/year)
- pre-revenue, funded by ongoing equity and convertible dilution

PEOPLE READ

Structurally the cleanest of the frontier names: one share, one vote (no founder super-voting), a chair separated from the CEO, a credentialed lead independent director (a former FAA Administrator), a 6-of-9 independent board, and strict anti-hedging/ownership rules. That separation and clean share class are why it scores above combined-Chair/CEO peer Archer. The offsets that keep it from a 5 are a classified board, a founder-related-party office lease, and Toyota's triple role as top shareholder, director and supplier. Key-person risk is moderate — real founder dependence, but leadership is shared with an executive co-founder.

THE FOUR LEGS

People
observable composite · 1-5

Opportunity
The scenario distribution · the Page-3 business snapshot

Context
The 7 Powers analysis (Power Origination)

Deal
Open-market purchase = the deal: entry price vs. the scenario distribution (the ~19.6% finding) + position sizing.

Joby Aviation supporting analysis · disclaimers · glossary

Bear \$0.42 Base \$3.65 Bull \$30.05

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

- 1

Type Cert is imminent.
Stage 4 in progress, SR3 audit complete Q1'26. Conforming aircraft already flying. Removes the largest single bear risk.
- 2

Best capitalized eVTOL.
\$2.5B cash exceeds Archer (\$1.8B) and Vertical (+\$850M raise). Multi-year runway through commercial scaling.
- 3

Partnership stack is unique.
Toyota (\$894M, mfg), Delta (\$200M, US distribution), Dubai RTA (exclusive 2032). No other eVTOL has this stack.
- 4

Operator + mfg = wider moat.
Joby owns/operates fleet rather than selling aircraft. Captures full revenue per flight, not just OEM margin.
- 5

Mature margin may be conservative.
Base case 13% reflects aerospace blend. If software-take-rate on partner aircraft scales, terminal margin could be 20%+.

FALSIFICATION TRIGGERS

Bear validation Type Cert slips to 2027+ · Cash < \$1.5B by EOY 2026 · Dubai passenger volume disappoints (< 50K rides FY27)	Bull validation Type Cert achieved by Q3 2026 · Dayton facility hits 4 aircraft/month · Second exclusive country contract signed	Reframe needed If Archer achieves Type Cert first — Joby's first-mover advantage in US erodes; share-of-TAM math compresses

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

eVTOL — Electric Vertical Take-Off and Landing aircraft. Joby's S4 is a 5-seat, 6-rotor design with ~100-mile range.	Type Certification — FAA approval to operate a new aircraft design commercially. Joby is in Stage 4 (final) of 4-stage process.	eIPP — eVTOL Integration Pilot Program. White House-backed initiative letting Joby fly in US states pre-Type Cert.
Dubai RTA — Roads & Transport Authority. Awarded Joby exclusive eVTOL air-taxi rights in Dubai through 2032.	Toyota partnership — \$894M total investment. Joint manufacturing program at Dayton, Ohio facility for production scale.	Blade — Helicopter-based mobility business acquired in 2024 — gives Joby existing routes (NYC-airport) for early ops.
