$1789.84B mkt cap · 2.57B sh · $81.6B cash, $58.7B debt · Net cash +$22.9B at YE25; FY25 buybacks ~$26B + dividends ~$5B, then no buybacks in H1'26; Revenue $201B FY25 (+22%); GAAP op margin 41.4%; FCF $46.1B, or ~$25.7B after $20.4B of stock comp; capex ~$72B, guided to $130-145B; $698 at the Oct-21 close: +6% YTD, +22% since Aug 31, ~12% below the $796 Aug-2025 high

22 October 2026 · the qualitative

$697.52

THE CENTRAL QUESTION

Is the ~$130B/yr AI capex building a second act beyond ads — the only case that clears ~$1.8T once stock comp is charged as a cost?

Meta trades at ~$1.79T (~$698, +6% YTD, +22% since Aug 31). Revenue grew +33% in Q1'26 and +28% in Q2 while capex heads to $130-145B (~2× FY25). Reported FCF adds back stock comp ($20.4B, 10% of FY25 revenue); charged as the real cost it is, FY25 FCF falls from $46.1B to ~$26B, or ~69× EV/FCF vs ~38× reported. The probability-weighted value sits ~44% below spot and the base case ~48% below, with 93% of the probability at or below the price.

PROBABILITY WEIGHTS

Ultra Bear 12% Bear 27% Base 34% Bull 20% Ultra Bull 7% · Weighted expected $393.65 (-43.6% vs spot)

ULTRA BEAR $133.30

-80.9% vs spot

Probability 12%

Capex burns; ad growth fades; margins compress.

WHY 12%

The genuine bear: the market already flinched (-6% after-hours) on the capex raise, the ROI is unproven, and Reality Labs has lost ~$80B cumulatively. 12% weight on the spend failing to convert to durable ad gains.

WHAT HAPPENS

The capex-ROI fear plays out: the $130-145B buildout lands as years of D&A ahead of return, AI ad efficiency plateaus, the ad cycle softens, and Reality Labs keeps bleeding ~$24B/yr. Revenue growth decelerates into the mid-single digits and FCF after stock comp stays near ~8-10% of revenue as depreciation outruns the operating line.

An ad business growing slowly while spending ~2x prior year on uncertain-return compute earns a ~14x terminal multiple on FCF after stock comp: DCF ~$133 (-81%). Net cash of ~$9/share cannot offset a buildout that does not earn its cost of capital.

BEAR $229.60

-67.1% vs spot

Probability 27%

Growth normalizes; D&A weighs on margins.

WHY 27%

Share gains and pricing continue but the D&A from ~$130B/yr capex caps margin and free cash flow. 27% as the plausible 'grows but the spend weighs' path given the elevated-capex regime.

WHAT HAPPENS

Ad growth normalizes off the +33% spike toward high-single/low-double-digit as the buildout's depreciation steps up, AI lifts pricing but only modestly, and Reality Labs stays a drag. Operating margin holds high-30s and FCF after stock comp sits ~10-13% of revenue as capex stays elevated against a larger D&A base.

DCF ~$230 (-67%) - a still-dominant ad franchise, but one digesting a heavy buildout at a ~16x terminal multiple on FCF after stock comp is worth about a third of today's price; the gap is warranted if the capex weighs on free cash flow longer than the ad engine compounds.

BASE $365.49

-47.6% vs spot

Probability 34%

AI lifts ads; margins hold ~41%; FCF compounds.

WHY 34%

Requires the AI capex to roughly earn its cost of capital while ad growth stays double-digit - consistent with the accelerating Q1'26 ad metrics and 41% margins, but not a step-change. 34% as the central outcome, still ~48% below the price.

WHAT HAPPENS

The modal path: AI-driven ad efficiency keeps lifting volume and price (the Q1'26 +33% is the first datapoint), revenue compounds ~14% a year to ~$385B by FY30, and operating margin holds ~41% as the buildout's returns roughly offset its D&A. FCF after stock comp grinds from ~12% of revenue toward ~16% as capex moderates against a larger base.

DCF ~$365 (-48%) - the ad engine compounds and the capex earns roughly its cost of capital, yet at a ~19x terminal multiple on FCF after stock comp the modal case is worth about half of today's price; the price already assumes more than the central outcome.

BULL $635.98

-8.8% vs spot

Probability 20%

AI ad engine compounds; capex pays off.

WHY 20%

Meta's own AI tools are already in the core ad stack and Q1'26 showed both volume and price accelerating; if that durability holds, the capex earns well above its cost. 20% weight on the buildout becoming a real ad-monetization engine.

WHAT HAPPENS

The capex pays off: AI ad-creation (Muse Spark, adopters ~8M) and ranking durably lift impressions and price, the buildout's return outruns its D&A, and operating margin expands past 42% as the ad engine scales on the compute. Revenue compounds high-teens and FCF after stock comp climbs from ~14% of revenue toward ~20% as capex intensity peaks and rolls over.

DCF ~$636 (-9%) - even if the AI spend converts to a structurally faster, higher-margin ad engine, a ~23x terminal multiple on FCF after stock comp leaves the bull below today's price: the capex paying off is already in the stock.

ULTRA BULL $917.14

+31.5% vs spot

Probability 7%

AI platform second act; FCF machine.

WHY 7%

Everything works - AI lifts ads AND opens a messaging/agent revenue stream AND the compute becomes a platform asset, the AWS/datacenter-style second act. ~7%, the long-duration tail.

WHAT HAPPENS

The full second act: AI compounds ad monetization across the 3B+ user graph, business-messaging and AI agents open a new revenue stream beyond the core ad TAM, and the compute buildout becomes an owned platform asset. Operating margin pushes mid-40s and FCF after stock comp climbs toward ~23% of revenue as the spend turns into durable, high-incremental-margin revenue.

DCF ~$917 (+31%) - the buildout earns a platform multiple (~25x terminal FCF after stock comp) as AI becomes an earnings engine rather than a cost; at ~7% probability, the only scenario that clears today's price.

Meta Platforms 7 Powers · the moat, scored

Bear $229.60 Base $365.49 Bull $635.98

Arena. Digital advertising / social platforms - Meta (3B+ user social graph, ~$55B/qtr ads, 41% margin) vs Alphabet/Google, Amazon ads, TikTok/ByteDance, and Snap/Pinterest/Reddit; auditing a branding + network-economies + scale Power against the AI-capex ROI question.

POWER AUDIT
dominant-power durability: high

POWER AUDIT · 7 POWERS

Scale Economies ■■■	Massive: ~$200B revenue and a global ad/infra base spread fixed R&D and compute across 3B+ users; AI capex deepens the cost-per-impression advantage if it earns out.
Network Economies · thesis leans here ■■■	The core Power: the social graph compounds - more users and content make each app more valuable to users and advertisers; cross-app (FB/IG/WhatsApp) reinforces it.
Counter-Positioning ■□□	Was the mobile-social disruptor; now the incumbent being counter-positioned by TikTok's algorithmic feed, which forced the Reels response.
Switching Costs ■■□	Moderate: social graph + content history + creator relationships create stickiness, but users multi-home and attention is contestable.
Branding ■■■	Real: Instagram/WhatsApp are category-defining consumer brands with global mindshare, though the corporate brand is contested and ad-trust is a perennial overhang.
Cornered Resource ■■□	The 3B+ user behavioral/interest dataset and the social graph itself are hard to replicate; tempered by privacy regulation (DMA, ATT) constraining its use.
Process Power ■■■	AI ad-ranking, creative (Muse Spark) and infra are a compounding learning curve; the open question is whether the capex turns this into durable monetization.

PEER SET

Alphabet (GOOGL) 15% gr · 32% mgn · ~57x EV/FCF
The other ad duopolist - Search/YouTube + full AI stack; the scale/margin benchmark and direct ad-budget competitor.

Amazon (AMZN) 13% gr · 11% mgn · ~4x EV/sales
Fastest-growing large ad platform (retail-media), taking share of performance budgets at the margin.

ByteDance / TikTok · private
The attention threat that forced Reels; algorithmic short-form competing directly for engagement and ad dollars.

Snap / Pinterest / Reddit 15% gr · 8% mgn · ~5x EV/sales
Sub-scale social-ad peers; pressure on incremental ad budgets, not the core graph.

THREAT VECTORS · FALSIFIERS

Network Economies · ByteDance / TikTok (attention)
falsifier: Family DAP growth stalls or turns negative as engagement and time-spent shift to short-form rivals, capping the impression base.

Process Power · AI-capex ROI (Alphabet's full stack)
falsifier: Ad growth decelerates while D&A from the ~$130B/yr buildout keeps climbing - the spend fails to convert to durable monetization.

Cornered Resource · Privacy regulation (DMA, ATT, FTC appeal)
falsifier: EU 'pay or consent' / signal-loss erodes ad targeting and pricing, or the FTC appeal reopens the structural-separation risk.

> **COMPETITIVE READ**
> Meta's network-economies Power is genuinely durable (high): the 3B+ social graph compounds, reinforced by scale across a ~$200B ad base and the Instagram/WhatsApp brands - and revenue growth of +33% in Q1'26 and +28% in Q2 shows the engine still growing fast. The Audit: network economies dominates, scale and branding reinforce it, and the live threats are TikTok's pull on attention, privacy regulation, and above all the ~$130B/yr AI-capex ROI. The Power does not rescue the price: at ~69x FCF after stock comp (~38x reported), the DCF lands a weighted -43.6%, the base ~48% below spot, and only the ultra-bull clears it.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Mark Zuckerberg · `founder-led` 22 yrs in seat

14%
insider ownership

HIGH
key-person risk

Capital allocation (realized)
Turned shareholder-return on aggressively: a $50B buyback authorization (Feb 2024) on top of prior programs, with ~$29.75B of Class A repurchased in FY2024 and ~$26B in FY2025, then none in H1 FY2026 as capex stepped up; plus the first-ever dividend ($0.50/quarter, initiated Feb 2024; ~$5.07B FY2024 incl. dividend equivalents). M&A built the franchise (Instagram 2012, WhatsApp 2014, Oculus 2014); subsequent deals drew FTC/antitrust scrutiny. Heavy R&D/capex — large multi-year AI/datacenter spend and the Reality Labs segment running deep operating losses. Stock comp ~$20.4B FY2025 (10.2% of revenue; ~$16.7B FY2024).

Incentive alignment
Pay is not the alignment lever — the founder stake is: FY2024 salary was $1 (by his request), $0 bonus, $0 new equity; reported other compensation (~$27.2M) is overwhelmingly personal security and aircraft costs, not incentive pay. No PSU/TSR program for the CEO (he takes no equity grants).

GOVERNANCE FLAGS

- super-voting dual-class (Class B = 10 votes vs Class A = 1) → ~61% founder voting control on ~14% economics
- Zuckerberg owns ~99.8% of Class B — voting control is non-dilutable by outside Class A issuance
- combined Chair + CEO (founder holds both roles)
- controlled company under Nasdaq rules — exempt from majority-independent-board requirements (Meta opts in anyway; board majority-independent)
- no independent shareholder check — the controller carries every shareholder vote

THE FOUR LEGS

Context
The 7 Powers analysis (Power Audit)

Deal
Open-market common — entry price weighed against the probability-weighted fair value, then position-sized.
`-43.6% vs spot $697.52`

> PEOPLE READ
>
> Founder-Chair-CEO with ~14% economics but ~61% non-dilutable voting control via Class B (10:1) — outsiders cannot force change and every shareholder vote is pre-decided. Aligned through the stake (not pay: $1 salary, $0 equity) and heavy returns through FY2025 (a $50B buyback, with no repurchases in H1 2026, plus the 2024 first-ever dividend), but the governance offsets stack: super-voting control, combined Chair/CEO, and controlled-company status.

Meta Platforms supporting analysis · disclaimers · glossary

Bear $229.60 Base $365.49 Bull $635.98

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

1 **FY25 cash flow is a capex trough.**
FCF after stock comp was ~23% of revenue in FY24, before capex doubled; the base never climbs back above ~16%.

2 **The capex ROI is the whole question.**
~$130B/yr capex (~2x prior year) is the bear; volume AND price accelerated in Q1'26, and revenue still grew +28% in Q2.

3 **Cash flow self-funds the buildout.**
Operating cash flow covered ~$70B of FY25 capex plus ~$26B of buybacks and ~$5B of dividends, and H1'26's $49B of capex.

4 **AI is already monetizing in the core ad stack.**
Proprietary Muse Spark ad-creative and AI ranking are live; adopters doubled to ~8M, with impressions +19% and price/ad +12% Q1'26.

5 **Breakup risk is materially reduced.**
Meta won the FTC antitrust trial (Nov-2025) and keeps Instagram/WhatsApp; the Jan-2026 appeal leaves a tail, not the breakup case.

FALSIFICATION TRIGGERS

Bull validation

ad revenue stays >=20% with BOTH impressions and price/ad rising · operating margin holds >=40% through the D&A step-up · FCF after stock comp tops ~16% of revenue · AI-ad adoption keeps compounding

Bear validation

ad growth decelerates into the mid-single digits · operating margin falls below ~38% as D&A outgrows revenue · FCF after stock comp stuck near ~10% of revenue · Reality Labs loss widens beyond ~$24B/yr

Reframe needed

if the ~$130B/yr capex visibly fails to earn its cost of capital - ad growth fades while D&A keeps climbing - re-rate the terminal toward a slow-growth, capex-heavy ad utility

AI-assisted analysis.

Substantial portions of this analysis were produced with the assistance of large language models. LLMs are known to fabricate facts, miscalculate numbers, hallucinate sources, and present incorrect information with high apparent confidence. Every figure, claim, and projection in this document should be independently verified before acting on it.

Forward-looking statements.

Scenarios, valuations, projections, and any forward-looking statements involve substantial assumptions and uncertainty. Actual results may differ materially from those projected. Past performance is not indicative of future results. The model is a model; reality is not.

Author may hold positions.

The author may own, intend to acquire, or hold short exposure to $META or related securities at any time. Positions may change without notice and without an update to this document. Do not assume the author's positions match the tone of the analysis.

Do your own research.

Do not make investment decisions on the basis of this document. Consult a licensed financial professional and read the company's official SEC filings (10-K, 10-Q, 8-K, proxy) before forming any investment view. If you wouldn't trust your retirement to a chatbot, don't trust this either.

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

Family of Apps — Meta's core ad business - Facebook, Instagram, WhatsApp, Messenger (~99% of revenue, 41%+ margin); the social-graph ad engine the DCF rests on.

Impressions x price/ad — The two ad-revenue drivers (Q1'26 +19% volume, +12% price); AI lifting both is the bull mechanism, a soft cycle the bear.

Reality Labs — The AR/VR/metaverse segment (~$24B/yr operating loss, ~$80B cumulative); a structural drag on margin and the bear's concrete cost line.

FCF after stock comp — Free cash flow less stock comp, which reported FCF adds back: ~13% of revenue in FY25, ~23% in FY24; the valuation's basis.

AI capex / ROI — The $130-145B FY26 buildout (~2x the prior ~$72B) of AI compute; whether it earns its cost of capital via faster, higher-priced ads is the biggest swing.
