Shake Shack

NYSE : SHAK · Mature-Company DCF

$2.91B mkt cap · 43M sh · $314M cash, $250M debt · Net cash +$64M ($314M cash vs $250M 0% convert, out-of-the-money); ~42.8M fully-diluted shares; Revenue $1.445B FY25 (+15%); GAAP op margin back to 4.3%; FCF +$57M (~4%); capex ~11.5% of revenue; Down ~28% YoY, up ~21% off the June-2026 guidance-cut low

22 October 2026 · the qualitative

$67.84

THE CENTRAL QUESTION

Did Shake Shack's ~28% crash to ~17x EV/EBITDA correct an excess to fair value — or overshoot a long-runway, new-CEO unit-growth compounder?

Shake Shack trades at ~$2.91B (~$67.84, down ~28% YoY after a June-2026 guidance cut) — ~17x EV/EBITDA on $1.445B revenue growing ~15%, net cash, operating margin back to 4.3%, FCF positive (~$57M, ~4%). The bull is a 4x US unit runway (~373 → 1,500), a sub-$2.0M build cost, a new CEO (Rob Lynch, ex-Papa John's); the bear is capital intensity keeping FCF thin while traffic is barely positive. The DCF asks whether the runway converts to FCF — the modal case lands below spot (-27%), so the crash corrected the excess, not created a bargain.

PROBABILITY-WEIGHTED EXPECTED VALUE

most likely case (base) -26.9% · 75% at or below spot

$49.21 expected fair value today

Shake Shack scenario narratives

PROBABILITY WEIGHTS

Ultra Bear 12% Bear 30% Base 33% Bull 18% Ultra Bull 7% · Weighted expected $49.21 (-27.5% vs spot)

ULTRA BEAR $13.04

-80.8% vs spot

Probability 12%

Traffic stalls; FCF never inflects.

WHY 12%

The genuine bear: traffic is already barely positive (FY26 SSS guided +2.5-3.0%, mostly price), beef inflation just forced a margin cut, and management missed its own FY25 EBITDA. 12% weight on the runway failing to convert.

WHAT HAPPENS

The consumer cracks and the better-burger trade-down bites: same-Shack sales go negative, AUV slides off its ~$4.0M peak, and the accelerating build pace (55-60 units/yr) keeps capex ahead of operating cash. FCF margin stays stuck near 3-4% as a soft top line de-levers the restaurant P&L.

A capital-intensive restaurant that isn't compounding FCF earns a low-single-digit-growth, ~9x terminal multiple → DCF ~$13 (-81%). Net cash sets a floor but can't offset a stalled unit machine.

BEAR $25.00

-63.1% vs spot

Probability 30%

Units grow; FCF stays thin.

WHY 30%

Share gains continue but the capital intensity + soft urban/tourism traffic keep FCF suppressed. 30% as the plausible 'grows but doesn't convert' path, given the guidance cut and the FY25 miss.

WHAT HAPPENS

Units keep opening but same-Shack sales stay low-single-digit and price-led, while heavy growth capex (~11-12% of revenue) holds FCF margin near 5%. The unit runway is real but the cash conversion isn't — revenue compounds ~7% to ~$2.0B at a still-thin ~5.5% FCF margin.

DCF ~$25 (-63%) — a capital-hungry grower whose free cash flow lags its revenue is worth well below today's price; the market's discount is warranted if FCF doesn't inflect.

BASE $49.56

-26.9% vs spot

Probability 33%

Runway continues; FCF grinds to 8%.

WHY 33%

Requires the unit runway to continue and FCF to improve as builds scale — consistent with management's plan and the build-cost reduction, but not a step-change. 33% as the central case, below spot.

WHAT HAPPENS

The modal path: company-operated units keep compounding low-double-digit toward the 1,500 target, SSS runs low-single-digit, and FCF margin grinds from ~4% toward ~8% as growth capex moderates against a larger base. Revenue compounds ~11% to ~$2.4B.

DCF ~$50 (-27%) — rich. A 4x unit runway is genuinely valuable, but at ~8% terminal FCF margin and a ~14x multiple the modal case falls short of today's price; the crash corrected the prior excess rather than overshooting it.

BULL $85.23

+25.6% vs spot

Probability 18%

Lynch delivers; FCF inflects to ~11%.

WHY 18%

Lynch's record leading Papa John's turnaround (digital and franchise-led) plus the build-cost cut make a genuine FCF inflection credible. ~18% weight on the operational turnaround landing.

WHAT HAPPENS

Rob Lynch's plan works: drive-thru/format expansion enlarges the addressable real estate, digital throughput and operational discipline lift restaurant margins, and FCF margin inflects toward ~11% as build cost stays below $2.0M. Revenue compounds ~13% to ~$2.7B.

DCF ~$85 (+26%) - if the unit runway converts to real free cash flow, the de-rated entry re-rates with the fundamentals; this is the core of the bull.

ULTRA BULL $120.70

+77.9% vs spot

Probability 7%

Wingstop-style compounder; FCF machine.

WHY 7%

Everything works - units AND margins AND international licensing AND a multiple re-rate, the Wingstop/Chipotle outcome under Lynch. ~7%, the long-duration tail.

WHAT HAPPENS

The full second act: company units march toward 1,500, capital-light international licensing scales the brand globally, digital/AI ('Project Catalyst') lifts throughput and margins, and Shake Shack becomes a true FCF machine at ~13% margin. Revenue compounds ~15% to ~$2.9B.

DCF ~$121 (+78%) - the brand reclaims a premium fast-casual compounder multiple; ~7% probability, the asymmetric upside the depressed entry is buying.

Shake Shack 7 Powers · the moat, scored

Bear $25.00 Base $49.56 Bull $85.23

Arena. Premium fast-casual / 'better burger' — Shake Shack (premium brand, ~$4.0M AUV, ~373 company-operated + ~285 licensed) vs Chipotle, Wingstop, Cava, Portillo's, and the burger set (Five Guys, In-N-Out, McDonald's value); auditing a brand Power against capital intensity and a crowded field.

POWER AUDIT
dominant-power durability: medium

POWER AUDIT · 7 POWERS

Scale Economies ■■□	Sourcing/marketing leverage at $1.4B revenue and growing, but small vs McDonald's/CMG; national scale is years away.
Network Economies □□□	None — restaurants aren't networks; the app/loyalty is a channel, not a network effect.
Counter-Positioning ■□□	Was the 'fine casual' better-burger disruptor; now the incumbent, with drive-thru a catch-up format, not counter-positioning.
Switching Costs □□□	Zero — dining is promiscuous; every meal is a fresh decision.
Branding · thesis leans here ■■■	The dominant Power: a genuine premium brand (NYC heritage, ~$4.0M AUV well above QSR, pricing power) — but brand alone doesn't convert to FCF while capex is heavy.
Cornered Resource ■□□	Prime urban real estate + recipes/hospitality culture; valuable but not truly cornered.
Process Power ■□□	Emerging under Lynch — build-cost reduction, throughput, digital ('Project Catalyst'); unproven at scale, the bull's swing factor.

PEER SET

Chipotle (CMG) — 6% gr · 17% mgn · ~18x EV/EBITDA
Best-in-class fast-casual compounder; the margin/FCF benchmark Shake Shack is measured against.

Wingstop (WING) — 11% gr · 25% mgn · ~37x EV/EBITDA
Asset-light franchise compounder (Lynch's old shop); also wobbling — Q1'26 domestic SSS -8.7%.

Cava (CAVA) — 25% gr · 12% mgn · ~46x EV/EBITDA
The fast-casual growth darling; richest multiple in the set, the unit-growth comp.

Portillo's (PTLO) — 12% gr · 10% mgn · ~14x EV/EBITDA
Closest size/model comp — mid-cap, capital-intensive unit growth, similar multiple.

THREAT VECTORS · FALSIFIERS

Branding · QSR value wars / trade-down (McDonald's, Five Guys, In-N-Out)
falsifier: Same-Shack traffic stays negative as premium pricing loses to value in a soft consumer.

Scale Economies · Beef/commodity + labor inflation
falsifier: Restaurant-level margin falls below ~21%, rolling back the recovery the build needs.

Process Power · Cava / Wingstop / capital intensity
falsifier: FCF turns negative again as the 55-60/yr build pace outruns operating cash.

COMPETITIVE READ

Shake Shack's brand Power is genuine — a premium 'fine casual' name with ~$4.0M AUV well above QSR and real pricing power — but a brand doesn't convert to free cash flow while capex runs 11-12% of revenue to fund a 4x unit runway. The Audit: branding is durable (medium), process_power is the emerging swing factor under Lynch (build-cost cut, drive-thru, digital), and the threats are capital intensity + a soft, value-seeking consumer. The ~28% de-rate to ~17x EBITDA corrected most of the prior excess; the DCF tests whether the runway converts to FCF, and the modal case lands -27% — cheap-looking on the multiple, rich on the cash.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Rob Lynch

2 yrs in seat

4.4%
insider ownership

MEDIUM
key-person risk

Capital allocation (realized)
Rob Lynch (ex-Papa John's) became CEO in May 2024 — a professional outside hire; founder Danny Meyer is non-executive Chairman, not CEO. The balance sheet is net cash (~$110M: $358M cash vs $248M of 0% converts due 2028). FY2025 revenue $1.45B (+15%), net income $50M, ~$57M FCF — a thin, capital-intensive profile (heavy unit-growth capex). No dividend or buyback.

Incentive alignment
Lynch's package is turnaround-weighted (FY2024 ~$13M, ~95% equity/bonus); insider trading is routine RSU tax withholding. Founder-Chairman Meyer is paid as a non-employee director and recently bought ~$2M of stock in the open market (May 2026) after selling into 2025 strength. The structural related-party item is the Up-C Tax Receivable Agreement — Shake Shack pays 85% of realized tax benefits to the continuing LLC owners (incl. Meyer).

GOVERNANCE FLAGS

- Up-C multi-class structure, but Class B is ONE vote per share (no super-voting) — public Class A holders are not disenfranchised
- founder-Chairman Meyer holds only ~8.3% of the vote, and his director-designation rights were wound down (terminated after the 2025 meeting) via a 2023 activist settlement — a de-escalation of founder control
- Chair and CEO are separated, but the Chair (Meyer) is the non-independent founder; 7 of 8 directors independent with a lead independent director (Flug)
- classified / staggered board (three classes) — an entrenchment feature
- Tax Receivable Agreement (85% of tax benefits to continuing LLC owners) and Union Square Hospitality founder ties — ongoing related-party vectors

THE FOUR LEGS

People
observable composite · 1–5

Opportunity
The scenario distribution · the business snapshot · the Arthur Indicator

Context
The 7 Powers analysis (Power Audit)

Deal
Open-market common — entry price weighed against the probability-weighted fair value + position sizing.
-27.5% vs spot $67.84

> **PEOPLE READ**
> A cleaner control profile than most founder-influenced names — no super-voting (Class B is one vote), the founder-Chairman holds only ~8.3% of the vote, and his special designation rights were deliberately wound down. But the Up-C structure with its 85% Tax Receivable Agreement, a classified board, a non-independent founder-Chairman, and a ~2-year outside CEO mid-turnaround keep it below the plain single-class blue-chips. Key-person risk is moderate, leaning low.

Shake Shack supporting analysis · disclaimers · glossary

Bear $25.00 Base $49.56 Bull $85.23

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

1 **The de-rate corrected an excess, it didn't create a bargain.**
~17x EV/EBITDA is cheap vs CAVA (~46x) / WING (~37x) but the modal DCF is still -27% — thin capital-intensive FCF, not the multiple, is the constraint.

2 **FCF conversion is the whole question.**
~$57M FCF on $1.445B revenue (~4%) while capex runs ~11-12%; the gap between 'units grow' and 'free cash flow grows' is the bull/bear fork.

3 **Build cost below $2.0M is the real improvement.**
A ~20% build-cost cut directly lifts new-unit cash-on-cash (~$0.9M restaurant profit on <$2.0M invested) and self-funds more of the runway.

4 **Proven turnaround CEO.**
Rob Lynch led Papa John's post-2019 turnaround; the drive-thru format + 'Project Catalyst' digital backbone are his levers here.

5 **Net cash; no solvency risk.**
$314M cash vs a single $250M 0% convert (OTM, due 2028) — no solvency risk; the downside is multiple/FCF, not survival.

FALSIFICATION TRIGGERS

Bull validation

traffic re-accelerates above +2% (not just price/mix) · restaurant-level margin holds >=23% through beef inflation · FCF margin expands toward 8-10% · 55-60+ builds/yr at <$2.0M

Bear validation

same-Shack sales turn negative or traffic stays negative 2+ quarters · restaurant-level margin falls below ~21% · FCF turns negative again as capex outruns cash · another guide-vs-miss on EBITDA

Reframe needed

if unit growth slows below ~45 builds/yr or build cost creeps back above ~$2.2M, the runway shortens - re-rate the terminal toward a low-growth, capital-intensive restaurant multiple

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

Same-Shack sales (SSS) — Comparable-base sales growth at company-operated Shacks open 24+ months; decelerating to ~+2% and increasingly price/mix, not traffic - the central bear signal.

Licensing — Capital-light royalty revenue (~3.7% of revenue but ~$2.2B system-wide sales) from licensed Shacks, mostly international - the brand's high-margin optionality.

Restaurant-level margin — Shack-level operating profit margin (non-GAAP, ~22.6% FY25) before corporate G&A and pre-opening - the unit-economics gauge; the build feeds it into a 4.3% company operating margin.

FCF margin — Free cash flow / revenue (~4% FY25); the mature-DCF swing factor - whether heavy growth capex lets the unit runway convert to free cash flow.

AUV — Average unit volume (~$4.0M company-operated) - the per-Shack sales base that, against build cost, sets new-unit returns.
