

Robinhood Markets

NASDAQ : \$94.5B mkt cap · 888M sh · \$4.26B cash, zero debt · Net cash ~\$4.3B, no debt; ~888.5M shares and growing (SBC-dilutive); ~\$82.8B market cap; Revenue \$4.473B FY25 (+49%); ~50% adj-EBITDA margin in Q1'26 (\$534M); FCF positive (~\$1.6B), but capital-light and cyclical; Down ~27% YTD to ~\$93 (52-wk \$63.52-\$153.86), giving back part of a ~280% 2025 rally

Mature-Company DCF

\$106.36

THE CENTRAL QUESTION

Has Robinhood diversified beyond crypto and rates into a durable platform worth ~52x FCF — or is it still a transaction broker levered to the crypto and rate cycle?

Robinhood trades at ~\$82.8B (~\$93, down ~27% YTD after a ~280% 2025 rally) — ~52x FCF on \$4.473B revenue growing ~49%, ~50% adj-EBITDA margin, net cash, share count rising (SBC-dilutive). Roughly a third of revenue is rate-sensitive net interest (~\$40M/qtr per 25bp Fed cut) and transaction revenue is crypto/rate-cyclical (crypto -47% last quarter). The DCF asks whether events/futures/options/Gold make HOOD a durable platform or it reverts to a transaction broker. The finding: even the bull lands -40%, and only the ultra-bull (-14%) approaches fair — the price embeds a hyper-growth platform the modal case (-59%) doesn't deliver.

| The cyclical case turns: crypto extends its slide (transaction already ~47% there last quarter), the Fed cuts and ~\$40M/qtr per 25bp drains net interest, and the events/futures push doesn't scale fast enough to offset. Revenue dips then crawls back low-single-digit as a transaction broker, not a platform. |                | Events/options/Gold grow but the crypto and rate cyclicity keep the top line lumpy; revenue normalizes to mid-single-digit as the hyper-growth fades and the SBC-driven share count keeps creeping. Robinhood is a good diversified broker, not a compounding platform. |                | The modal path: event contracts (+320% off a small base), futures (MIAXdx JV), options, Gold (4.3M subs/+36%) and banking/credit broaden the mix enough to keep ~30%+ FCF margins and double-digit-fading-to-high-single growth, but the crypto and rate cyclicity stays in the model. Revenue compounds toward ~\$7B. |                | The diversification thesis lands: prediction markets, futures, options and the Gold/banking ecosystem compound into a durable platform, deposit growth (~20%) cushions rate cuts, and Robinhood out-grows the cycle at a ~35% FCF margin. Revenue compounds high-teens early then high-single as the base scales. |                | The full second act: prediction markets become a major venue, futures/tokenized assets/Bitstamp scale globally, banking/credit deepen the relationship, and the revenue base diversifies enough that the crypto/rate cycle stops driving it - a true fintech platform at a high-30s% FCF margin. Revenue compounds ~20%+ early. |                |
| A cyclical broker whose growth has reversed earns a low-teens FCF multiple → DCF ~\$20 (~79%). Net cash sets a floor, but at ~52x FCF entry the de-rate to a cyclical multiple is most of the loss.                                                                                                                 |                | DCF ~\$28 (~69%) - a ~30%-FCF-margin broker growing mid-single-digit is worth a mid-teens multiple, well below ~52x; the market's premium unwinds as growth normalizes.                                                                                                 |                | DCF ~\$38 (~59%) - even crediting durable diversification at a ~16x FCF terminal, the modal case sits well below spot; ~52x FCF prices a faster, less cyclical platform than the base delivers.                                                                                                                        |                | DCF ~\$56 (~40%) - a genuine platform re-rate, yet still below spot; even crediting the bull case, ~52x FCF starts above where durable diversification gets you.                                                                                                                                                  |                | DCF ~\$80 (~14%) - the only path that approaches today's price, and it requires nearly everything to work; ~8% probability, the asymmetric outcome the rich entry is paying for.                                                                                                                                                |                |

Robinhood Markets business snapshot

Bear \$28.47 Base \$38.25 Bull \$56.02

FY21-FY25 history + FY26-FY30 scenario projections · fiscal years end Dec · Q1 FY2026 results (Apr-28)

Sources: SEC XBRL company facts (CIK 1783879), Robinhood Q1 FY2026 release (net revenue \$1.07B/+15%, transaction \$623M incl event contracts \$147M/+320% and crypto \$134M/-47%, net interest \$359M/+24%, adj EBITDA \$534M/~50% margin, 27.4M funded customers). CAVEAT: XBRL tags no clean broker operating margin, so the op-margin history uses net-margin estimates. Revenue is a growth path off FY25; FCF = revenue x FCF margin; Gordon terminal. Multiples vs Coinbase / Schwab / IBKR.

# Robinhood Markets 7 Powers · the moat, scored

Bear \$28.47 Base \$38.25 Bull \$56.02

**Arena.** Online brokerage / fintech rails - Robinhood (mobile-first broker, 27.4M funded customers, Gold ecosystem) vs Coinbase, Charles Schwab, Interactive Brokers, Webull, Cash App; auditing a nascent platform/branding Power against a weak moat and the transaction/rate cycle.

dominant-power durability: medium

POWER AUDIT · 7 POWERS

|                                                                                            |                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scale Economies</b> · thesis leans here<br><div><div></div><div></div><div></div></div> | The dominant Power: 27.4M funded customers and ~\$4.5B revenue spread fixed tech/clearing/compliance cost - real operating leverage (~50% EBITDA margin), the source of the FCF. |
| <b>Network Economies</b><br><div><div></div><div></div><div></div></div>                   | Nascent - prediction markets and a social/referral layer have mild network character, but trading isn't a true two-sided network.                                                |
| <b>Counter-Positioning</b><br><div><div></div><div></div><div></div></div>                 | Was the zero-commission disruptor that forced incumbents to drop fees; now the model is copied (Schwab/Fidelity went free), so the edge has eroded to brand/UX.                  |
| <b>Switching Costs</b><br><div><div></div><div></div><div></div></div>                     | Weak - ACATS portability and low balances make accounts easy to move; this is the moat's central hole.                                                                           |
| <b>Branding</b><br><div><div></div><div></div><div></div></div>                            | A genuine consumer-fintech brand (the app + Gold ecosystem, default broker for a younger cohort), but young and not yet pricing power.                                           |
| <b>Cornered Resource</b><br><div><div></div><div></div><div></div></div>                   | None - no proprietary asset; order flow, rates and crypto venues are all contestable.                                                                                            |
| <b>Process Power</b><br><div><div></div><div></div><div></div></div>                       | Fast product velocity (events, futures, banking, Bitstamp shipped quickly), but execution speed, not a structural process moat.                                                  |

COMPETITIVE READ

Robinhood's Power is scale\_economies - 27.4M funded customers and ~\$4.5B revenue across fixed tech/clearing cost throw off a ~50% EBITDA margin and the FCF that supports the case - plus a nascent network/branding edge in the app and Gold ecosystem. But the moat is weak: switching costs are near zero (ACATS portability), the zero-commission counter-positioning has been copied, and the live threat is the transaction/rate cycle itself (crypto -47% last quarter, ~\$40M/qtr per 25bp rate cut) plus bigger brokers. The Audit: the scale Power is medium-durable, diversification is genuine but early, and that squares with a DCF where ~52x FCF prices a durable platform the modal case (-59%) doesn't deliver - only the ultra-bull (-14%), where the cyclicity truly fades, approaches today's price.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Vlad Tenev · founder-led

13 yrs in seat

12%insider ownership

MEDIUMkey-person risk

**Capital allocation (realized)**  
Co-founder Vlad Tenev is Chairman, CEO and President (co-founded 2013). The company is now profitable (FY2025 revenue ~\$4.5B, adjusted EBITDA ~\$2.5B) with ~\$5B cash and minimal debt. Capital return began post-profit: a \$1B buyback authorized May 2024, raised to \$1.5B by March 2026 (~\$1.2B executed), no dividend. Recent acquisitions include Bitstamp (~\$200M) and TradePMR (~\$300M); crypto is an expanding line. Co-founder Baiju Bhatt left management in 2024 (to found Aetherflux) but remains a director.

**Incentive alignment**  
A notable shareholder-friendly action: the 2021 founder mega-RSU award (~\$4.7B at grant, vesting on \$120-\$300 price targets) was voluntarily cancelled in 2023 with none of it vested. Tenev holds ~6% economic / ~24% of the vote; the co-founders together control a majority of votes. Insider selling is recurring and 10b5-1-scheduled.

GOVERNANCE FLAGS

- three-class structure with Class B = 10 votes (held only by the co-founders): Tenev ~24% of the vote on ~6% economics, and the co-founders together control a majority of votes
- combined Chair & CEO (Tenev), mitigated by a long-tenured lead independent director (Jonathan Rubinstein)
- the super-voting sunset is distant (2036), so founder voting control persists for years
- co-founder Bhatt left management (2024) but remains a director and is selling down his Class B stake
- CEO split attention — Tenev is also executive chairman of a separate AI company (Harmonic)
- extensive regulatory history (SEC \$65M in 2020; FINRA \$70M in 2021 and ~\$30M in 2025 — payment-for-order-flow, supervision, AML)
- shareholder-friendly offset: the 2021 ~\$4.7B founder mega-RSU award was voluntarily cancelled in 2023, unvested

PEOPLE READ

A dual-class super-voting structure with the founders controlling a majority of votes, plus a combined Chair/CEO, are the entrenchment flags. They are offset enough to hold a 3 rather than drop lower: a long-tenured lead independent director, an 8-of-10 independent board with annual elections, the genuinely shareholder-friendly cancellation of the 2021 mega-award, and a now-profitable business returning capital. The extensive regulatory history is an operating/compliance flag rather than a structural one. Key-person risk is moderate given the deep, professionalized bench.

Bear \$28.47 Base \$38.25 Bull \$56.02

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

- 1

**~52x FCF prices a platform, not a broker.**  
~50% EBITDA margin and +49% revenue look elite, but ~32% is rate-sensitive net interest and transaction is crypto-cyclical - even the bull is -40%.
- 2

**Crypto -47% is the cyclicality, in the open.**  
Crypto transaction revenue fell 47% in a quarter; the offset (events +320%, options) proves the top line still swings with the trade.
- 3

**Rate cuts are a mechanical drag.**  
~\$40M/qtr per 25bp Fed cut flows straight out of net interest - a multi-hundred-million headwind the multiple doesn't discount.
- 4

**Diversification is genuine - but partial and early.**  
Events, MIAIdx futures, Gold (4.3M/+36%), banking/credit and Bitstamp broaden the mix, yet on small bases against the crypto/rate core.
- 5

**SBC dilutes the per-share math.**  
Share count (~888.5M) keeps rising on stock comp; growth must outrun dilution to lift per-share value.

FALSIFICATION TRIGGERS

Bull validation

events + futures + options scale to a steady >25% of transaction revenue · net-interest share falls below ~25% · deposit/Gold growth holds >20% · FCF margin holds >=33% through a rate-cut cycle

Bear validation

crypto transaction revenue keeps falling and isn't offset · net interest drops materially on Fed cuts · revenue growth normalizes below ~10% · regulatory action on tokenized equities or prediction markets

Reframe needed

if crypto + net interest stay the swing factors and the new lines plateau, re-rate the terminal toward a cyclical-broker multiple (Coinbase/IBKR), not a platform

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

**Transaction revenue** — Order-flow / transaction-based revenue from options, crypto, equities and event contracts (~\$623M Q1, options the largest); the crypto-cyclical core diversification is meant to de-risk.

**Net interest revenue** — Interest earned on margin loans, cash and securities (~\$359M Q1, ~32% of revenue); the rate-sensitive line losing ~\$40M/qtr per 25bp Fed cut - the swing factor against the cycle.

**Event contracts / prediction markets** — Yes/no contracts on real-world outcomes (~\$147M Q1, +320%); the fastest-growing new line and the centerpiece of the diversification thesis.

**Gold subscription** — Robinhood's ~\$5/mo membership (4.3M subs, +36%) bundling higher rates, margin and perks; recurring, counter-cyclical revenue that deepens the customer relationship.

**FCF margin** — Free cash flow / revenue (~30-38% across scenarios); the mature-DCF lever - whether diversification keeps the high margin durable as the crypto/rate cycle turns.
