NASDAQ : \$2619.72B mkt cap · 10.73B sh · \$123B cash, \$68.4B debt · \$123B cash vs ~\$54B net cash after lease/debt; ~10.73B shares; no dividend, capital is plowed into capex not buyback; Revenue \$716.9B FY25 (+12%); GAAP op margin 11.2% (record); FCF crushed to ~\$7.7B (~1%) by the ~\$200B AI capex surge; ~\$238.55, +14% TTM, down ~10% over 30 days on capex fears; 52-wk range \$196-\$279

Mature- Company DCF

\$244.04

THE CENTRAL QUESTION

Does Amazon's ~\$200B/yr AI-infrastructure capex earn its cost of capital as AWS reaccelerates — or compress returns into an overbuild before FCF recovers off the FY25 trough?

Amazon trades at ~\$2.56T (~\$238.55, +14% TTM, down ~10% in 30 days on capex fear) - but the FCF multiple is distorted: FY25 free cash flow was crushed to ~\$7.7B (from ~\$33B in FY24) by a ~\$200B AI-data-center build. The DCF models FCF margin recovering off that trough as AWS reaccelerates (+28%) and retail/ads margins expand. The finding is roughly fair (~6.9%): the modal base ~-12% as depreciation lags monetization, a wide spread either way.

AI overbuild; FCF stays trough-bound.		AWS holds; FCF recovers slowly.		AWS reaccelerates; FCF normalizes to ~11%.		AI ROIC compounds; margin re-rates.		AWS AI platform; full re-rate.	
WHY 12%		WHY 26%		WHY 34%		WHY 20%		WHY 8%	
The structural-overbuild case: capex jumped +77% YoY with a 6-24 month monetization lag, the FTC Buy-Box trial opens Oct 2026, and International OI is already declining. 12% weight on the build failing to earn its cost of capital.		AWS keeps share but the capex digestion period drags FCF recovery, with the antitrust and International-margin overhangs intact. 26% as the plausible 'grows but cash conversion lags' path.		Requires AWS to hold high-20s% growth and FCF to normalize off the trough as the build monetizes - consistent with the +28% print, Trainium sold-out demand, and the capex peaking, but not a step-change. 34% as the central, near-fair outcome.		AWS AI demand sustains the growth, Trainium defends/expands margins, and the capex converts to high-ROIC capacity rather than overbuild - the demonstrated AWS franchise plus custom silicon make it credible. 20% weight on the AI infrastructure earning its return.		Everything works - AWS AI platform leadership AND Trainium margin expansion AND advertising AND retail leverage AND a multiple re-rate, the AWS/Starlink-class compounding outcome. ~8%, the long-duration tail.	
WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS		WHAT HAPPENS	
The ~\$200B capex never earns its cost of capital: AI demand cools or commoditizes, AWS growth fades back toward the teens, depreciation outruns monetization, and an FTC/EU overhang drags. FCF margin barely lifts off the ~1% FY25 trough toward 5% as the build keeps absorbing cash. Revenue still compounds ~6% on retail/ads but operating margin stalls near 10%.		AWS grows but decelerates off the +28% print, capex stays elevated for several years, and depreciation keeps a lid on margins, so FCF margin claws only partway back toward 8%. Retail and advertising keep expanding but can't fully offset the AI-infrastructure drag. Revenue compounds ~9% to ~\$1.1T at a still-suppressed FCF margin.		The modal path: AWS sustains high-20s% growth on AI demand, Trainium economics defend its ~38% margin, the capex wave peaks and FCF margin normalizes off the trough toward ~11% as the build monetizes, while retail margins (NA 9.0%) and ~\$70B advertising scale. Revenue compounds ~11% to ~\$1.2T.		The AI capex earns a high return: AWS holds high-teens-to-20s% growth with triple-digit AI revenue, Trainium vertical integration lifts AWS margins above 38%, retail/ads operating leverage compounds, and FCF margin inflects toward ~14% as monetization catches the depreciation. Revenue compounds ~14% to ~\$1.4T.		The full second act: AWS becomes the dominant AI-compute platform on Trainium economics, advertising scales into a third profit engine, retail margins keep climbing, and Amazon re-rates to a high-FCF-margin platform at ~16% margin. Revenue compounds ~16% to ~\$1.5T.	
An overbuilt hyperscaler whose capital doesn't convert earns a low-growth ~15x terminal FCF multiple → DCF ~\$59 (-75%). The net cash sets a floor, but a stranded-asset AI build cannot be discounted away.		DCF ~\$119 (-50%) - a hyperscaler whose free cash flow lags its revenue while it digests a multi-year build is worth well below today's price; the market's capex worry is warranted if FCF recovers only slowly.		DCF ~\$209 (-12%) - roughly fair-to-slightly-rich. AWS reacceleration and a normalizing FCF margin are genuinely valuable, but at the modal recovery and a ~21x terminal FCF multiple the model lands just below today's price; the capex still has to earn its return for spot to be fair.		DCF ~\$370 (+55%) - if the ~\$200B build clearly earns its cost of capital, the FCF normalization plus an AI-platform margin re-rate carry the stock well above spot; this is the core of the bull.		DCF ~\$487 (+104%) - the AI-infrastructure bet pays off in full and the FCF machine re-rates to a platform multiple; ~8% probability, the asymmetric upside the trough FCF is masking.

Amazon.com 7 Powers · the moat, scored

Bear \$118.75 Base \$209.08 Bull \$369.75

Arena. Cloud infrastructure + e-commerce/advertising - Amazon (AWS cloud leader, the largest US marketplace, fast-growing ad business) vs Microsoft Azure, Google Cloud, and retail rivals Walmart/Shopify; auditing scale, switching, and network Powers against a ~\$200B AI capex bet and an FTC trial.

POWER AUDIT
dominant-power durability: high

POWER AUDIT · 7 POWERS

Scale Economies 	Strong: AWS infrastructure scale + Trainium vertical integration lower unit cost; fulfillment/logistics scale across the largest US marketplace - a genuine, compounding cost advantage.
Network Economies 	The marketplace two-sided network (more buyers → more sellers → more selection) is real and self-reinforcing, though weaker than a pure social network and contestable by Walmart/Shopify.
Counter-Positioning 	Was the e-commerce disruptor; now the incumbent - little counter-positioning left, and AWS faces well-capitalized Azure/GCP, not a slow legacy.
Switching Costs · thesis leans here 	High in AWS: embedded workloads, data gravity, committed-spend contracts, and re-architecture cost make migration painful - the stickiest Power, the AWS retention moat.
Branding 	Trust/convenience (Prime) is a real consumer asset, but cloud is bought on price/performance, not brand; modest as a pricing Power.
Cornered Resource 	Custom silicon (Trainium) + Prime membership + first-party logistics are valuable and hard to copy, but not uniquely cornered against Azure/GCP/Walmart.
Process Power 	Decades of logistics/operations and cloud-operations learning curves (fulfillment, AWS reliability, custom hardware) are a real, hard-to-replicate process advantage.

COMPETITIVE READ

Amazon's Powers are genuine and durable: AWS switching costs (data gravity, committed spend) are the stickiest, layered on scale (AWS infrastructure + Trainium, fulfillment) and a self-reinforcing marketplace network. The Audit: switching_costs is the dominant, high-durability Power - hard for Azure/GCP to dislodge - but the live threat is the ~\$200B AI-capex bet and whether AWS AI demand earns its cost of capital before rivals erode growth. That squares with the DCF: the franchise isn't in question, the return on the build is, and the modal case lands ~-12% (roughly fair) because spot already assumes the capex monetizes and FCF normalizes off the FY25 trough.

PEER SET

Microsoft (Azure) The #1 cloud rival; Azure + OpenAI is the AWS AI-compute benchmark and the main switching-cost threat.	16% gr · 45% mgn · ~35x EV/FCF
Alphabet (Google Cloud) #3 cloud growing fast with a full AI stack/TPUs; pressures AWS growth and margins on AI workloads.	13% gr · 32% mgn · ~25x EV/FCF
Walmart Largest US retailer; scaled e-commerce + advertising + marketplace - the network/scale challenger on the retail side.	5% gr · 4% mgn · ~35x P/E
Shopify Arms the long tail of independent merchants against the Amazon marketplace; the network-economies pressure on retail.	25% gr · 12% mgn · ~60x EV/FCF

THREAT VECTORS · FALSIFIERS

Switching Costs · Microsoft Azure / Google Cloud (AI workloads) falsifier: AWS growth decelerates back toward the teens as AI workloads shift to Azure/GCP, signaling the migration cost is being overcome.
Network Economies · Walmart + Shopify (marketplace) falsifier: US marketplace/seller share erodes as Walmart's network and Shopify's merchant base take third-party GMV.
Scale Economies · AI capex overbuild / FTC antitrust falsifier: FCF fails to recover off the trough for 2+ years, or the Oct-2026 FTC Buy-Box trial forces structural marketplace changes that dent unit economics.

PEOPLE · WHO RUNS / OWNS / FUNDS IT

Andy Jassy

5 yrs in seat

9%
insider ownership

MEDIUM
key-person risk

Capital allocation (realized)
No dividend ever paid; the sole return program is a \$10B buyback authorization (March 2022, no expiration) that has gone largely unused — ~\$6.1B still remaining in 2025, no repurchases in the quarters ended March 2024 or 2025. Cash is reinvested instead: FY2025 capex \$128.3B (vs \$77.7B FY2024, the step driven by AI/AWS infrastructure), ~\$200B guided for FY2026; D&A \$41.9B FY2025. SBC \$19.5B FY2025 (down ~12% YoY). M&A: MGM (\$8.5B, closed Mar 2022), One Medical (\$3.9B, closed Feb 2023); the iRobot deal was terminated Jan 2024 (\$94M break fee paid).

Incentive alignment
No new annual equity grant — no RSU award since 2021. Pay rests on a single 10-year grant made when he became CEO in 2021 (originally valued ~\$212M), vesting through 2031 on a fixed schedule regardless of stock performance. FY2024 realized comp ~\$40.1M (that grant vesting plus stock appreciation); the FY2025 Summary Comp Table figure was ~\$2.1M (base ~\$365K plus security/travel) since no new award was made. Heavily equity-front-loaded, time-based.

GOVERNANCE FLAGS

- single-class common stock (one share, one vote) — no dual-class / super-voting, a structural positive vs the dual-class mega-cap peers
- founder Jeff Bezos is Executive Chair (stepped down as CEO July 2021); Chair and CEO roles are split
- Bezos beneficially owns ~9% — fell below 10% for the first time in 2025 via scheduled sales
- Jamie Gorelick is lead independent director; majority-independent board

PEOPLE READ

Andy Jassy has been CEO since July 2021 and founder Jeff Bezos is Executive Chair holding ~9%, on a clean single-class one-share-one-vote register with a split Chair/CEO structure and a lead independent director; capital is directed to reinvestment (FY2025 capex \$128.3B, ~\$200B guided 2026) over capital return — no dividend and a largely-unused buyback.

Bear \$118.75 Base \$209.08 Bull \$369.75

PUSHBACK · WHY THE BASE CASE IS TOO HARSH

- 1 **The FCF multiple is distorted by the capex trough.**
FY25 FCF was crushed to ~\$7.7B (from ~\$33B in FY24) by the ~\$200B build; the DCF prices the recovery off the trough, not the depressed print - that's why the multiple looks extreme.
- 2 **AWS reaccelerating is the whole bull.**
AWS +28% (fastest in 15 quarters) at ~\$150B run-rate and ~37.7% margin, with triple-digit AI revenue growth - the question is whether that demand justifies the depreciation.
- 3 **Trainium is the margin defense.**
Custom silicon (Trainium/Graviton/Nitro) is >\$20B run-rate with ~\$225B commitments and Trainium2 sold out - vertical integration lowers AI cost and defends AWS margins as the build scales.
- 4 **Advertising is a high-margin third engine.**
~\$70B annualized and growing fast, structurally high-margin - it scales operating income independent of the AWS capex cycle.
- 5 **The swing is AWS AI ROIC, not solvency.**
~\$54B net cash and a record 11.2% op margin mean no balance-sheet risk; the downside is whether ~\$200B/yr of capex earns its cost of capital, not survival.

FALSIFICATION TRIGGERS

Bull validation AWS growth holds high-20s% with expanding margin · FCF margin recovers off the ~1% trough toward 10%+ · Trainium commitments convert to revenue · advertising sustains 20%+ growth	Bear validation AWS growth decelerates back toward the teens · capex keeps rising while FCF stays trough-bound · depreciation compresses AWS margin below ~35% · adverse FTC/EU cloud ruling	Reframe needed if AWS AI demand cools or commoditizes and the ~\$200B build becomes a visible overbuild (FCF fails to recover 2+ years), re-rate the terminal toward a low-ROIC capital-heavy multiple

GLOSSARY · CONCEPTS REFERENCED IN THE NARRATIVE

AWS — Amazon Web Services - the cloud-infrastructure segment (~\$150B run-rate, ~38% operating margin, ~16-17% of revenue but the majority of operating income); reaccelerated to +28% on AI demand, the central swing.	Capex / AI infrastructure — Capital expenditure on AI data centers and chips (~\$200B guided FY26, ~+50% YoY); the cash drag that crushed FY25 FCF, with a 6-24 month lag to monetization - the bear's mechanism.	Trainium — Amazon's custom AI training silicon (with Graviton/Nitro, >\$20B run-rate, ~\$225B commitments, Trainium2 sold out); vertical integration that lowers AI cost and defends AWS margins.
AI ROIC — Whether the ~\$200B/yr AI-infrastructure build earns its cost of capital; the biggest 5-year swing factor.	FCF margin — Free cash flow / revenue (~1% in FY25 at the capex trough vs ~5% in FY24); the bet is recovery off the trough.
